ERP TO E2RP

ERP to E2RP: A Case Study Approach is a comprehensive and well-organized book that covers the wide aspects of ERP and E2RP. The text highlights the details of operational and supporting processes related to industry verticals, namely, manufacturing, healthcare and construction. It presents general implementation methodologies as well as specific methodologies prescribed by Oracle and SAP for the implementation of their products. The book contains few sample business processes that are mapped with the help of ERP product screens. Part I of the book focusses on ERP including the concepts, evolution, various business processes in different verticals and implementation methodologies. Part II of the book explicates the concept of E2RP. Apart from that, this part describes its need, major functionality of its modules, namely, supply chain management, customer relationship management, business intelligence and employee focus portals (intranet). Moreover, topics related to new emerging technologies (i.e., open source ERP and cloud ERP) and knowledge management are also covered in this part. Following a simple and engaging style, this book is primarily designed for the undergraduate students of computer science and engineering, information technology and also for the postgraduate students of management and computer application. Key Features Incorporates numerous Case Studies that are based on face to face interaction with the organizations. Includes several pedagogical features such as chapterwise summary, exercises and assignments. Provides glossary at the end of the book.

Global Business and Management Research

The Journal of Global Business and Management Research (GBMR) strives to comply with highest research standards and scientific/research/practice journals' qualities. INFORMATION SYSTEMS MANAGEMENT IN BUSINESS AND DEVELOPMENT ORGANIZATIONS

Management Information Systems (MIS) has fast emerged as a multi-disciplinary area having strategic interfaces to achieve organizational objectives. This comprehensive book discusses the underlying principles of business and development organizations, identifies their core areas and prescribes approaches to develop MIS. Divided into five parts, Part I—Understanding Organizations for MIS deals with organizational issues and focuses on the rationale behind creating organizations, especially business and development organizations, to understand their distinguishing features. Part II—Systems Approach to Organizations covers conceptualization, identification, design and development of Information System (IS) for the organization in order to have better systems in place to support organizational goals. Part III—Understanding MIS discusses the relevance of MIS in organizations and the forms it can take to meet the strategic needs of the respective organizations. Part IV—Understanding Information Technologies describes possible approaches to plan, identify and deploy ICT in the acquiring organizations and provides insight into the barriers that creep in during identification and deployment of IS and ICT keeping in view the organizational objectives. Part V—Planning and Implementation of MIS concludes with a discussion on preparation of MIS plan and issues related to its implementation. The book is intended for the postgraduate students of management specializing in rural management and IT. Key Features • Describes life cycle approach and systems approach to organizations. • Contains a large number of case studies. • Provides real-life examples to put the concepts in the right perspective.

MIS Cases

A casebook to complement most MIS/CIS textbooks. Designed to demonstrate how software can support managerial decision-making activities, this casebook features 20 cases (more than another casebook currently on the market) that cover functional areas of the firm, are spread across three difficulty levels basic, intermediate, and advanced and require students to apply spreadsheet, database, Web-page development, and/or presentation graphics software, often in an integrated manner. The cases present common managerial issues and problems and encourage students to actually use their models to make decisions for the case's characters. Many of the cases require students to prepare both written and oral presentations of their solutions.

Information Systems for the Fashion and Apparel Industry brings together trends and developments in fashion information systems, industrial case-studies, and insights from an international team of authors. The fashion and apparel industry is fast-growing and highly influential. Computerized information systems are essential to support fashion business operations and recent developments in social media, mobile commerce models, radio frequency identification (RFID) technologies, and ERP systems are all driving innovative business measures in the industry. After an introductory chapter outlining key decision points and information requirements in fast fashion supply chains, Part One focuses on the principles of fashion information systems, with chapters covering how decision making in the apparel supply chains can be improved through the use of fuzzy logic, RFID technologies, evolutionary optimization techniques, and artificial neural networks. Part Two then reviews the range of applications for information systems in the fashion and apparel industry to improve customer choice, aid design, implement intelligent forecasting and procurement systems, and manage inventory and returns. Provides systematic and comprehensive coverage of information systems for the fashion and apparel industry Combines recent developments and industrial best-practices in apparel supply chain management in order to meet the needs of the fashion and apparel industry professionals and academics Features input from a team of highly knowledgeable authors with a range of professional and academic experience, overseen by an editor who is a leading expert in the field Reviews the range of applications for information systems in the fashion and apparel industry to improve customer choice, aid design, implement intelligent forecasting and procurement systems, and manage inventory and returns

Essentials of Management Information Systems

This book analyses the role of Enterprise Resource Planning (ERP) and Business Intelligence (BI) systems in improving information quality through an empirical analysis carried out in Italy. The study begins with a detailed examination of ERP features that highlights the advantages and disadvantages of ERP adoption. Critical success factors for ERP implementation and post-implementation are then discussed, along with the capabilities of ERP in driving the alignment between management accounting and financial accounting information. The study goes on to illustrate the features of BI systems and to summarize companies' needs for BI. Critical success factors for BI implementation are then presented, along with the BI maturity model and lifecycle. The focus of the research entails a detailed empirical analysis in the Italian setting designed to investigate the role played by ERP and BI systems in reducing information overload/underload and improving information quality by influencing the features of information flow. The practical and theoretical implications of the study are discussed and future avenues of research are suggested. This book will be of value for all those who have an interest in the capacities of ERP and BI systems to enhance business information quality.

Information Systems for the Fashion and Apparel Industry

Managing (e)Business Transformation comprises text and cases designed to show students how a business can be transformed into an internetworked enterprise where IT infrastructures are used to link customers, suppliers, partners and employees to create superior economic value. The book is written based on the premise that integrating internet technologies throughout the value chain is crucial to building and managing customer relationships. Importantly, it underscores the centrality of basic business and economic principles within the context of a networked environment. The book builds on

established business and economic theories, concepts and fundamentals to show that 'e-business' will soon be synonymous with 'business'. The book takes a strong managerial perspective, especially popular with MBA students, to argue that the internet is simply an enabling technology, which allows firms to build the infrastructure needed to operate in an evolving business world. The application of theory/concepts is emphasized throughout and contains a range of international case studies enhance the learning experience. This book is a must for all students studying e-business strategy at undergraduate, MBA and postgraduate level. Enterprise Resource Planning (ERP) refers to large commercial software packages that promise a seamless integration of information flow through an organization by combining various sources of information into a single software application and a single database. The outcome of ERP itself is still a mystery, but the trends and issues it has created will be the enigma that future generations will have to solve. Traditionally, separate units were created within an organization to carry out various tasks, and these functional areas would create their own information systems thereby giving rise to systems that were not integrated. ERP strives to provide a solution to these problems. Enterprise Resource Planning Solutions and Management examines the issues that need to be further studied and better understood to ensure successful implementation and deployment of ERP systems.

Computer Applications for Communication, Networking, and Digital Contents

Technical developments continue to enable great change in organisations. Securing the benefits, however, requires more than technology; it requires a coherent approach to organisational and strategic issues. This book draws on both academic research and current practice to present a distinctively organisational perspective on the management of computer-based information systems. This second edition of Managing Information Systems maintains a four-part framework and a range of valuable pedagogical features to encourage active learning. In brief, it provides: An organisational perspective to elicit discussion from a strategic and managerial position Analysis of recent developments in areas such as the integration of CRM, ERP and related systems A recurring Chapter Case to explore connections between theories or models and current practice Activity and MIS in Practice features to promote critical reflection and encourage further research The book is intended for those who are studying information systems as part of a management degree on undergraduate, MBA or similar postgraduate courses. David Boddy is a Research Fellow at the School of Business and Management, University of Glasgow. He is author of two other books published by Pearson Education: Management: An Introduction (2002) and Managing Projects (2002). Albert Boonstra is a lecturer and researcher at the University of Groningen, the Netherlands. As well as teaching undergraduate and MBA students, he also consults for many organisations on the management of information systems. Graham Kennedy works in the change management department of the Royal Bank of Scotland and has over 20 years of experience of applying information technology to achieve business benefits.

ECRM2014-Proceedings of the 13th European Conference on Research Methodology for Business and Management Studies

This book constitutes the proceedings of the 4th EuroSymposium on Systems Analysis and Design, SIGSAND/PLAIS 2011, held in Gdańsk, Poland, in September 2011. The objective of this symposium is to promote and develop high-quality research on all issues related to systems analysis and design (SAND). It provides a forum for SAND researchers and practitioners in Europe and beyond to interact, collaborate, and develop their field. The 9 papers were carefully reviewed and selected from 20 submissions. An additional revision took place after the conference to incorporate discussion results from the presentation. The contributions are organized into topical sections on business process modeling, integrated systems development, and software development.
