Logic Programming '87

This volume contains most of the papers presented at the 6th Logic Programming Conference held in Tokyo, June 22-24, 1987. It is the successor of Lecture Notes in Computer Science volumes 221 and 264. The contents cover foundations, programming, architecture and applications. Topics of particular interest are constraint logic programming and parallelism. The effort to apply logic programming to large-scale realistic problems is another important subject of these proceedings.

Extended Reach Drilling - Solutions and Applications

Japan is aging rapidly, and its government has been groping with the implications of this profound social change. In a pioneering study of postwar Japanese social policy, John Creighton Campbell traces the growth from small beginnings to an elaborate and expensive set of pension, health care, employment, and social service programs for older people. He argues that an understanding of policy change requires a careful disentangling of social problems and how they come to be perceived, the invention (or borrowing) of policy solutions, and conflicts and coalitions among bureaucrats, politicians, interest groups, and the general public. The key to policy change has often been the strategies adopted by policy entrepreneurs to generate or channel political energy. To make sense of all these complex processes, the author employs a new theory of four "modes" of decision-making--cognitive, political, artifactual, and inertial. Campbell refutes the claim that there is a unique "Japanese-style welfare state." Despite the big differences in cultural values, social arrangements, economic priorities, and political control, government responsibility for the "aging-society problem" is broadly similar to that in advanced Western nations. However, Campbell's account of how Japan has taken on that responsibility raises new issues for our understanding of both Japanese politics and theories of the welfare state. Originally

How Policies Change

This book constitutes the proceedings of the 22nd IFIP WG 8.5 International Conference on Electronic Government, EGOV 2023, which took place in Budapest, Hungary, during September 5–7, 2023. The 28 full papers included in this book were carefully reviewed and selected from a total of 106 submissions. They were organized in topical sections as follows: Digital government; artificial intelligence, algorithms, and automation; open government and open data; smart cities, regions, and societies; innovation and transformation in government.

The goal of this text is to describe the technical design aspects of the IT infrastructure; it does not give the details of installing and customizing SAP software, nor business process reengineering. Using primarily HP products for the solution examples, the chapters guide the reader through the foundation of the systems from an IT perspective, reviews its business application and architecture and introduces the server systems, then describes data storage, high availability and recovery solutions, client PCs with front-end user interfaces, output management and printing solutions, network infrastructure and requirements, cabling designs, LANs and WANs, and connecting mySAP.com to the Internet. Both authors are members of the HP-SAP International Competence Center. Annotation copyrighted by Book News, Inc., Portland, OR

Plunkett's Almanac of Middle Market Companies 2008 is designed to be time-saving business development tool for professionals, marketers, sales directors, consultants and strategists seeking to understand and reach middle market American companies. It will also be of great use to placement, recruiting and human resources professionals, as well as professionals working in economic development, lending and media. It covers competitive intelligence, market research and business analysis--everything you need to identify and develop strategies for middle market corporations. Coverage includes all major business sectors, from InfoTech to health care to telecommunications and much more. (We have intentionally omitted retail companies and banks.) These profiles and details on over 500 middle market firms are pulled from our extensive company and industry databases. We also include a business glossary and a listing of business contacts, such as industry associations and government agencies. Next, we profile hundreds of leading middle market companies. Our company profiles include complete business descriptions and up to 27 executives by name and title. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

How to Reach Your Public

Drawing on records of President Clinton's 1992 election campaign and interviews with key policy players, this text analyzes political theories on agenda setting. It investigates how managed competition became the President's reform framework, and shows how issues and

Plunkett's Almanac of Middle Market Companies: Middle Market Research, Statistics & Leading Companies

Have you ever been frustrated by not having solved a difficult problem rightly, bringing fear and more uncertainty to you? Well, this type of situation has happened to me. So, given my eighteen years of experience working as Industrial Quality Manager; I assembled a Problem Analysis Technique which

uses text data as input and combines Japanese approach (charts and figures) to understand problem's context with creative tools such as TRIZ, Creativity Workout by Edward de Bono to get innovative solutions. Both approaches are combined in the technique to work holistically to reach right solutions. I intend to teach you this technique in a joyful way using a real case study as if we were playing with jigsaws to understand problem's context. Also, play by throwing dice to get creative solutions. In the beginning, its application requires effort and discipline, but later, you can work efficiently with that robust method. One benefit of this technique is that you can work as an individual or as a team to tackle complex problems based on text or verbal data to understand its context well and reach the right solutions. Another benefit that I have taken in my professional life is that I gathered useful information in short meetings. Also, it is an integrated analysis process which has guided me to define right solutions. Finally, if you use this technique frequently, you may improve your analysis and creativity skills and your conscious level. On the other hand, I am convinced that the majority of the world's people need urgently to improve their conscious level to survive on environmental, social and technological dramatic changes. I believe that one way to do so it is developing their analysis skill and creating on them a good reading habit. If they improved their conscious level, then, the world would progress and survive in the future. You may be curious about the book's cover which shows a submarine in the ocean. Imagine the submarine as your life. The Periscope allows you to see beyond your surroundings (the technique). The Captain decides with good judgment what to do (you). The Sonar shows your route (gathering information). The colossal squid in the sea represents difficulties. The Engine (your determination) to move forwards and upwards (progress). This guide has eight steps whose first seven steps involve two Japanese quality tools such as Affinity and Relations Diagrams. The last step uses creativity tools such as TRIZ, Edward de Bono's Creativity workout and a website called ask Nature to inspire you in getting innovative solutions. I have been using those Japanese diagrams for over ten years and the given creativity tools for more than three years in my profession. This powerful technique was applied to a complex Latin-American problem "Little sustainable Progress in Venezuela and rest of Latin America" obtaining practical and innovative solutions to that region of the world. One fundamental cause of this significant Latin-American's problem is its Authoritarian Culture. This prunes people's self-confidence, proactivity, and entrepreneurship. This evil has been present in Latin-America for more than 500 years which hasn't permitted them to progress sustainably. Another great benefit of this book is that offers strategies and solutions to introduce liberal thinking into that Authoritarian culture, including Meritocracy rule. South Korea has already used some of these strategies. If you apply this method in your professional life, you may have more possibilities to improve your job's status or business's profits, by strengthening your competencies on analysis and creativity. At that moment, you will feel more confident to face complicated problems and uncertainty with less anxiety and fear. Finally, I invite you to read this e-book, if you had any question or doubt about the technique's use, I gladly help you. So am leaving my contact information, at the end of this book.

The Road to Nowhere

Robots are used in industry, rescue missions, military operations, and subwater missions. Their use in hazardous environments is crucial in terms of occupational safety of workers and the health of rescue and military operations. This book presents several hazardous environment operations and safe operations of robots interacting with people in the context of occupational health and safety.

Reaching the Right Solutions!

This book introduces a radically spatialised approach to knowledge creation and innovation. Reflecting on an array of European urban and regional developments, it offers an updated notion of milieu as the conceptual and material space of knowledge and innovation in line with the interpretative turn in social sciences and humanities. In view of the unwillingness of mainstream economics to accommodate such a trend, the authors pursue a broadly understood hermeneutic approach that expands on the triad of knowledge-space-innovation. The book's main findings are that space is an essential intermediary in the connection between knowledge and innovation, and that a renewed notion of milieu provides the knowledge-space-innovation triad with both an analytical basis and operational power. It also offers fresh insights into the significance and potential of the knowledge economy. A number of empirical European case studies on various scales (organisations, cities and territories) support the findings and suggest new policy directions.

The next major advance in the Web-Web 3.0-will be built on semantic Web technologies, which will allow data to be shared and reused across application, enterprise, and community boundaries. Written by a team of highly experienced Web developers, this book explains examines how this powerful new technology can unify and fully leverage the ever-growing data, information, and services that are available on the Internet. Helpful examples demonstrate how to use the semantic Web to solve practical, real-world problems while you take a look at the set of design principles, collaborative working groups, and technologies that form the semantic Web. The companion Web site features full code, as well as a reference section, a FAQ section, a discussion forum, and a semantic blog.

This edited volume examines strategies to make future cities more sustainable. The aim of these and other initiatives of the recent past, is to transform our cities into smarter cities. Thereby, these solutions are determined to boost clean electricity and pollution reduction, improve the life of citizens and transform city environment and regulatory structures. As the EUs ambition is to become carbon-neutral until 2050, the outlined projects also consider fostering economy prosperity and social wellness and environmental sustainability. The greatest challenge being already built urban spaces that need to be transformed quickly and at low costs. The book will analyze future smart cities in three centric dimensions: energy and sustainable development, smart infrastructures for smart cities, social involvement and economic prosperity. With its global approach, the volume is highly useful for professionals involved in city planning and urban ecology.

Plunkett's InfoTech Industry Almanac 2007 (E-Book)

Since 1975, the Marcel Grossmann Meetings have been organized to provide opportunities for discussing recent advances in gravitation, general relativity and relativistic field theories, emphasizing mathematical foundations, physical predictions and experimental tests. The objective of these meetings is to facilitate exchange among scientists that may deepen our understanding of space-time structures and to review the status of ongoing experiments aimed at testing Einstein's theory of gravitation from either the ground or space. The Eighth Marcel Grossmann Meeting took place on 22-27 June, 1997, at the Hebrew University of Jerusalem, Israel. The scientific program included 25 plenary talks and 40 parallel sessions during which 400 papers were presented. The papers that appear in this book cover all aspects of gravitation, from mathematical issues to recent observations and experiments.

Holistic Approach for Decision Making Towards Designing Smart Cities

Plunketts InfoTech Industry Almanac presents a complete analysis of the technology business, including the convergence of hardware, software, entertainment and telecommunications. This market research tool includes our analysis of the major trends affecting the industry, from the rebound of the global PC and server market, to consumer and enterprise software, to super computers, open

systems such as Linux, web services and network equipment. In addition, we provide major statistical tables covering the industry, from computer sector revenues to broadband subscribers to semiconductor industry production. No other source provides this books easy-to-understand comparisons of growth, expenditures, technologies, imports/exports, corporations, research and other vital subjects. The corporate profile section provides in-depth, one-page profiles on each of the top 500 InfoTech companies. We have used our massive databases to provide you with unique, objective analysis of the largest and most exciting companies in: Computer Hardware, Computer Software, Internet Services, E-Commerce, Networking, Semiconductors, Memory, Storage, Information Management and Data Processing. We've been working harder than ever to gather data on all the latest trends in information technology. Our research effort includes an exhaustive study of new technologies and discussions with experts at dozens of innovative tech companies. Purchasers of the printed book or PDF version may receive a free CD-ROM database of the corporate profiles, enabling export of vital corporate data for mail merge and other uses.

Ready to take your career to the next level? Find out everything you need to know about negotiating effectively with this practical guide. Negotiations are an increasingly important part of both our professional and private lives. This summary will help you to negotiate effectively, getting what you want out of an exchange without putting your relationship with the other party at risk. In 50 minutes you will be able to: • Identify what makes a good negotiator and how you can adopt a pragmatic approach • Learn how to prepare your arguments and define your expectations, helping you to stay focused and identify your non-negotiables • Analyse the important to listening to the other party and making compromises, in order to find a solution that satisfies the needs and interests of all involved ABOUT 50MINUTES.COM | COACHING The Coaching series from the 50Minutes collection is aimed at all those who, at any stage in their careers, are looking to acquire personal or professional skills, adapt to new situations or simply re-evaluate their work-life balance. The concise and effective style of our guides enables you to gain an in-depth understanding of a broad range of concepts, combining theory, constructive examples and practical exercises to enhance your learning.

Plunkett's Infotech Industry Almanac 2006: The Only Complete Guide to the Technologies and Companies Changing the Way the World Thinks, Works and Shar

There is a wide consensus about the necessity of sustainable development. There is also a consensus that wide areas of our economy, industry, and technology and the life styles in industrialized countries are not sustainable. Science and technology are widely regarded as (main) causes for this situation. Issues in this context comprise the generally low resource efficiency, an increased and mostly undebated technological power, an increased invasiveness of modern technologies, increasing amounts and diversity of pollutants, and high technological risks. On the other hand science and technology are also regarded as (main) solution providers towards more sustainability. Thus the question is which type of science and technology is rather a part of the problem, and which type is rather a part of the solution? 'Learning from nature' may give some orientation in this context. Biomimetics and bionics are widely regarded as being a part of the solution.

Learn the key standards—iBeacon, Eddystone, Bluetooth 4.0, and AltBeacon—and how they work with other proximity technologies. Then build your understanding of the proximity framework and how to identify and deploy the best solutions for your own business, institutional, or consulting needs. Proximity technology—in particular, Bluetooth beacons—is a major source of business opportunity, and this book provides everything you need to know to architect a solution to capitalize on that opportunity. What You'll Learn Understand the disruptive implications of digital–physical convergence and the new applications it makes possible Review the key standards that solutions developers need to understand to capitalize on the business opportunity of proximity technology Discover the new phenomenon of beacon networks, which will be hugely significant in driving strategic decisions and creating wealth See other technologies in the proximity ecosystem catalyzed by and complementary to Bluetooth beacons, including visual light communication, magnetic resonance, and RFID Examine the Beacosystem framework for analyzing the proximity ecosystem Who This Book Is For Solutions

Technical Bulletin

The global development community is teeming with different ideas and interventions to improve the lives of the world's poorest people. Whether these succeed in having a transformative impact depends not just on their individual brilliance but on whether they can be brought to a scale where they reach millions of poor people. *Getting to Scale* explores what it takes to expand the reach of development solutions beyond an individual village or pilot program so they serve poor people everywhere. Each chapter documents one or more contemporary case studies, which together provide a body of evidence on how scale can be pursued. The book suggests that the challenge of scaling up can be divided into two solutions: financing interventions at scale, and managing delivery to large numbers of beneficiaries. Neither governments, donors, charities, nor corporations are usually capable of overcoming these twin challenges alone, indicating that partnerships are key to success. Scaling up is mission critical if extreme poverty is to be vanquished in our lifetime. *Getting to Scale* provides an invaluable resource for development practitioners, analysts, and students on a topic that remains largely unexplored and poorly understood. Contributors: Tessa Bold (Goethe University, Frankfurt), Wolfgang Fengler (World Bank, Nairobi), David Gartner (Arizona State University), Shunichiro Honda (JICA Research Institute), Michael Joseph (Vodafone), Hiroshi Kato (JICA), Mwangi Kimenyi (Brookings), Michael Kubzansky (Monitor Inclusive Markets), Germano Mwabu (University of Nairobi), Jane Nelson (Harvard Kennedy School), Alice Ng'ang'a (Strathmore University, Nairobi), Justin Sandefur (Center for Global Development), Pauline Vaughan (consultant), Chris West (Shell Foundation)

Successful Negotiation

The United States is struggling to control its sprawling land use patterns and to develop a unifying strategy of smart growth. The new millennium has brought with it greater popular understanding of this matter, and it is now known that land use law and practice directly address the problems associated with sprawl. In his new book, *Well Grounded, Using Local Land Use Authority to Achieve Smart Growth*, John R. Nolon explores the growing interest in land use law and practice that has been stimulated by the public's increasing disfavor with urban sprawl and its support of smart growth initiatives. For land use novices, the book's glossary defines technical terms and each chapter provides basic definitions of all topics before delving into more complicated applications of them. *Well Grounded* is a comprehensive, easy-to-use, and practical reference for land use officials and professionals, academics, and citizens in all states.

Filled with rich case examples, this pragmatic book provides a complete toolkit for couple-focused cognitive-behavioral therapy (CBT). The book presents guidelines for planning and implementing evidence-based treatment for diverse couples. It explains how to assess relationship functioning as well as the strengths and needs of each partner and the sociocultural factors that shape their experiences. Drawing on decades of clinical experience and research, the authors demonstrate ways to tailor CBT for couples struggling with partner aggression; infidelity; sexual problems; financial issues; parenting conflicts; depression, anxiety, and other individual problems; and more. Therapists of any theoretical

orientation will find tools they can easily incorporate into their work with couples. More than 20 ready-to-use client handouts discussed in the book are available to download and print.

Potentials and Trends in Biomimetics

Deep neural networks (DNNs) with their dense and complex algorithms provide real possibilities for Artificial General Intelligence (AGI). Meta-learning with DNNs brings AGI much closer: artificial agents solving intelligent tasks that human beings can achieve, even transcending what they can achieve. *Meta-Learning: Theory, Algorithms and Applications* shows how meta-learning in combination with DNNs advances towards AGI. *Meta-Learning: Theory, Algorithms and Applications* explains the fundamentals of meta-learning by providing answers to these questions: What is meta-learning?; why do we need meta-learning?; how are self-improved meta-learning mechanisms heading for AGI?; how can we use meta-learning in our approach to specific scenarios? The book presents the background of seven mainstream paradigms: meta-learning, few-shot learning, deep learning, transfer learning, machine learning, probabilistic modeling, and Bayesian inference. It then explains important state-of-the-art mechanisms and their variants for meta-learning, including memory-augmented neural networks, meta-networks, convolutional Siamese neural networks, matching networks, prototypical networks, relation networks, LSTM meta-learning, model-agnostic meta-learning, and the Reptile algorithm. The book takes a deep dive into nearly 200 state-of-the-art meta-learning algorithms from top tier conferences (e.g. NeurIPS, ICML, CVPR, ACL, ICLR, KDD). It systematically investigates 39 categories of tasks from 11 real-world application fields: Computer Vision, Natural Language Processing, Meta-Reinforcement Learning, Healthcare, Finance and Economy, Construction Materials, Graphic Neural Networks, Program Synthesis, Smart City, Recommended Systems, and Climate Science. Each application field concludes by looking at future trends or by giving a summary of available resources. *Meta-Learning: Theory, Algorithms and Applications* is a great resource to understand the principles of meta-learning and to learn state-of-the-art meta-learning algorithms, giving the student, researcher and industry professional the ability to apply meta-learning for various novel applications. A comprehensive overview of state-of-the-art meta-learning techniques and methods associated with deep neural networks together with a broad range of application areas Coverage of nearly 200 state-of-the-art meta-learning algorithms, which are promoted by premier global AI conferences and journals, and 300 to 450 pieces of key research Systematic and detailed exploration of the most crucial state-of-the-art meta-learning algorithm mechanisms: model-based, metric-based, and optimization-based Provides solutions to the limitations of using deep learning and/or machine learning methods, particularly with small sample sizes and unlabeled data Gives an understanding of how meta-learning acts as a stepping stone to Artificial General Intelligence in 39 categories of tasks from 11 real-world application fields

The *Polymeric Materials Encyclopedia* presents state-of-the-art research and development on the synthesis, properties, and applications of polymeric materials. This groundbreaking work includes the largest number of contributors in the world for a reference publication in polymer science, and examines many fields not covered in any other reference. With multiple articles on many subjects, the encyclopedia offers you a broad-based perspective on a multitude of topics, as well as detailed research information, figures, tables, illustrations, and references. Updates published as new research unfolds will continue to provide you with the latest advances in polymer science, and will keep the encyclopedia at the forefront of the field well into the future. From novices to experienced researchers in the field, anyone and everyone working in polymer science today needs this complete assessment of the state of the art. The entire 12-volume set will be available in your choice of printed or CD-ROM format.

Getting to Scale

Three unassailable facts will strike you as soon as you start to read *The Future of Innovation*: ¤ One: innovation is the new mantra; whether you're involved in teaching art and design, new product development for a blue chip consumer brand or responsible for providing public services to citizens; ¤ Two: understanding innovation requires multiple perspectives; from culture and mindset, social and commercial context, new ways of working as much as new products or services; ¤ Three: innovation is a journey; drawing on insights from around the globe is essential to accelerate our progress. Bettina von Stamm and Anna Trifilova have gathered together the thoughts and ideas of over 200 of the most

creative innovators from business, professional practice and academia from nearly 60 countries. The contributors look at innovation from almost every angle. Their statements offer an unparalleled view of innovation and provide a depth of insight that is extraordinary. The editors' reflection on each statement and on the sections within the book, provide useful links between themes and reinforce the relationships between many of the ideas. Anyone interested in innovation (student, researcher or practitioner) will benefit from this global thought collection. The contributors' multiple perspectives, models, practical examples and stories provide a sense of innovation that no single writer could ever capture. The Future of Innovation is supported by the website www.thefutureofinnovation.org, where you can find even more contributions and tools that enable you to exchange, expand, elaborate and develop your perspectives on the future of innovation.

Today's workforce is experiencing job burnout in epidemic proportions. Workers at all levels, both white- and blue-collar, feel stressed out, insecure, misunderstood, undervalued, and alienated at their workplace. This original and important book debunks the common myth that when workers suffer job burnout they are solely responsible for their fatigue, anger, and don't give a damn attitude. The book clearly shows where the accountability often belongs. . . .squarely on the shoulders of the organization.

Treatment Plans and Interventions in Couple Therapy

This timesaving resource features: Treatment plan components for 30 behaviorally based presenting problems Over 1,000 prewritten treatment goals, objectives, and interventions—plus space to record your own treatment plan options A step-by-step guide to writing treatment plans that meet the requirements of most insurance companies and third-party payors The Probation and Parole Treatment Planner provides all the elements necessary to quickly and easily develop formal treatment plans that satisfy the demands of HMOs, managed care companies, third-party payors, and state and federal review agencies. Saves you hours of time-consuming paperwork, yet offers the freedom to develop customized treatment plans for clients on parole or probation Organized around 30 main presenting problems, from probation/parole noncompliance and vocational deficits to violent aggressive behavior and childhood trauma, abuse, and neglect Over 1,000 well-crafted, clear statements describe the behavioral manifestations of each relational problem, long-term goals, short-term objectives, and clinically tested treatment options Easy-to-use reference format helps locate treatment plan components by behavioral problem or DSM-5™ diagnosis Includes a sample treatment plan that conforms to the requirements of most third-party payors and accrediting agencies (including HCFA, TJC, and NCQA)

Meta-Learning

The only book to not only discuss the technicalities of the European REACH chemicals registration process, but also to directly address the resulting business risks and business solutions. In this text for practitioners, the author pulls together the key knowledge needed to successfully run a business under REACH, distilling thousands of pages of official documentation, and incorporating experiences from different-sized enterprises in a global context. Starting with the basics of the REACH framework, she explains the entire process on how to register with the European ECHA office with a particular emphasis on small and medium-sized businesses. Along the way, she describes key milestones and presents sample documents from real case studies. The final part of the book addresses strategies to ensure a reach-compliant operation, including recommendations for in-house processes as well as

communicating with suppliers and downstream users. As a result, managers in the pharmaceuticals and chemicals industries will learn how to operate their companies in full compliance with REACH standards.
