Medical-Surgical Nursing Exam 2.

Marco who was diagnosed with brain tumor was scheduled for craniotomy. In preventing the development of cerebral edema after surgery, the nurse should expect the use of

Halfway through the administration of blood, the female client complains of lumbar pain. After stopping the infusion Nurse Hazel should

Nurse Maureen knows that the positive diagnosis for HIV infection is made based on which of the following

Answer: B. These tests confirm the presence of HIV antibodies that occur in response to the presence of the human immunodeficiency virus (HIV)

Nurse Maureen is aware that a client who has been diagnosed with chronic renal failure recognizes an adequate amount of high-biologic-value protein when the food the client selected from the menu was

Kenneth who has diagnosed with uremic syndrome has the potential to develop complications. Which among the following complications should the nurse anticipates

A client is admitted to the hospital with benign prostatic hyperplasia, the nurse most relevant assessment would be

A client has undergone with penile implant. After 24 hrs of surgery, the client's scrotum was edematous and painful. The nurse should

Nurse hazel receives emergency laboratory results for a client with chest pain and immediately informs the physician. An increased myoglobin level suggests which of the following?

Nurse Maureen would expect the a client with mitral stenosis would demonstrate symptoms associated with congestion in the

A client has been diagnosed with hypertension. The nurse priority nursing diagnosis would be

Answer: A. Managing hypertension is the priority for the client with hypertension. Clients with hypertension frequently do not experience pain, deficient volume, or impaired skin integrity. It is the asymptomatic nature of hypertension that makes it so difficult to treat.

Nurse Hazel teaches the client with angina about common expected side effects of nitroglycerin including

The following are lipid abnormalities. Which of the following is a risk factor for the development of atherosclerosis and PVD?

Which of the following represents a significant risk immediately after surgery for repair of aortic aneurysm?

Nurse Josie should instruct the client to eat which of the following foods to obtain the best supply of Vitamin B12?

Karen has been diagnosed with aplastic anemia. The nurse monitors for changes in which of the following physiologic functions?

Lydia is scheduled for elective splenectomy. Before the clients goes to surgery, the nurse in charge

final assessment would be

Answer: B. An elective procedure is scheduled in advance so that all preparations can be completed ahead of time. The vital signs are the final check that must be completed before the client leaves the room so that continuity of care and assessment is provided for

What is the peak age range in acquiring acute lymphocytic leukemia (ALL)?

Answer: A. The peak incidence of Acute Lymphocytic Leukemia (ALL) is 4 years of age. It is uncommon after 15 years of age.

Marie with acute lymphocytic leukemia suffers from nausea and headache. These clinical manifestations may indicate all of the following except

A client has been diagnosed with Disseminated Intravascular Coagulation (DIC). Which of the following is

Which of the following findings is the best indication that fluid replacement for the client with hypovolemic shock is adequate?

Which of the following signs and symptoms would Nurse Maureen include in teaching plan as an early manifestation of laryngeal cancer?

Karina a client with myasthenia gravis is to receive immunosuppressive therapy. The nurse understands that this therapy is effective because it

A female client is receiving IV Mannitol. An assessment specific to safe administration of the said drug is

Answer: C. The osmotic diuretic mannitol is contraindicated in the presence of inadequate renal function or heart failure because it increases the intravascular volume that must be filtered and excreted by the kidney

Patricia a 20 year old college student with diabetes mellitus requests additional information about the advantages of using a pen like insulin delivery devices. The nurse explains that the advantages of these devices over syringes includes

Answer: A. These devices are more accurate because they are easily to used and have improved adherence in insulin regimens by young people because the medication can be administered discreetly

A male client's left tibia was fractured in an automobile accident, and a cast is applied. To assess for damage to major blood vessels from the fracture tibia, the nurse in charge should monitor the client for

Answer: C. Damage to blood vessels may decrease the circulatory perfusion of the toes, this would indicate the lack of blood supply to the extremity

While performing a physical assessment of a male client with gout of the great toe, Nurse Vivian should assess for additional tophi (urate deposits) on the

Nurse Katrina would recognize that the demonstration of crutch walking with tripod gait was understood when the client places weight on the

Mang Jose with rheumatoid arthritis states, the only time I am without pain is when I lie in bed perfectly still. During the convalescent stage, the nurse in charge with Mang Jose should encourage

A male client has undergone spinal surgery, the nurse should

Marina with acute renal failure moves into the diuretic phase after one week of therapy. During this phase the client must be assessed for signs of developing

Nurse Judith obtains a specimen of clear nasal drainage from a client with a head injury. Which of the following tests differentiates mucus from cerebrospinal fluid (CSF)?

Answer: C. The constituents of CSF are similar to those of blood plasma. An examination for glucose content is done to determine whether a body fluid is a mucus or a CSF A CSF normally contains glucose.

A 22 year old client suffered from his first tonic-clonic seizure. Upon awakening the client asks the nurse, What caused me to have a seizure? Which of the following would the nurse include in the primary cause of tonic clonic seizures in adults more the 20 years?

Answer: B. Trauma is one of the primary cause of brain damage and seizure activity in adults. Other common causes of seizure activity in adults include neoplasms, withdrawal from drugs and alcohol, and vascular disease.

What is the priority nursing assessment in the first 24 hours after admission of the client with thrombotic CVA?

Nurse Linda is preparing a client with multiple sclerosis for discharge from the hospital to home. Which of the following instruction is most appropriate?

Answer: C. The nurse most positive approach is to encourage the client with multiple sclerosis to stay active, use stress reduction techniques and avoid fatigue because it is important to support the

immune system while remaining active.

The nurse is aware the early indicator of hypoxia in the unconscious client is

Answer: D. Restlessness is an early indicator of hypoxia. The nurse should suspect hypoxia in unconscious client who suddenly becomes restless.

A client is experiencing spinal shock. Nurse Myrna should expect the function of the bladder to be which of the following?

Which of the following stage the carcinogen is irreversible?

Among the following components thorough pain assessment, which is the most significant?

Answer: D. Intensity is the major indicative of severity of pain and it is important for the evaluation of the treatment.

A 65 year old female is experiencing flare up of pruritus. Which of the client's action could aggravate the cause of flare ups?

Atropine sulfate (Atropine) is contraindicated in all but one of the following client?

Among the following clients, which among them is high risk for potential hazards from the surgical experience?

Nurse Jon assesses vital signs on a client undergone epidural anesthesia. Which of the following would the nurse assess next?

Nurse Katrina should anticipate that all of the following drugs may be used in the attempt to control the symptoms of Meniere's disease except

Which of the following complications associated with tracheostomy tube?

Nurse Faith should recognize that fluid shift in an client with burn injury results from increase in the Answer: C. In burn, the capillaries and small vessels dilate, and cell damage cause the release of a histamine-like substance. The substance causes the capillary walls to become more permeable and significant quantities of fluid are lost.

An 83-year-old woman has several ecchymotic areas on her right arm. The bruises are probably caused by

Nurse Anna is aware that early adaptation of client with renal carcinoma is

A male client with tuberculosis asks Nurse Brian how long the chemotherapy must be continued.

Nurse Brian's accurate reply would be

Answer: B. Tubercle bacillus is a drug resistant organism and takes a long time to be eradicated.

Usually a combination of three drugs is used for minimum of 6 months and at least six months beyond culture conversion

A client has undergone laryngectomy. The immediate nursing priority would be

Answer: A. Patent airway is the most priority; therefore removal of secretions is necessary

Intro

Postoperative thyroidectomy nursing care includes which measures?

What would the nurse note as typical findings on the assessment of a client with acute pancreatitis?

A client is found to be comatose and hypoglycemic with a blood sugar level 50 mg/dl. What nursing action is implemented first?

Which medication will the nurse have available for the emergency treatment of tetany in the client who has had a thyroidectomy?

What is the primary action of insulin in the body?

What will the nurse teach the diabetic client regarding exercise in his/her treatment program?

The nurse is caring for a client who has exophthalmos associated with her thyroid disease. What is the cause of exophthalmos?

What is characteristic symptom of hypoglycemia that should alert nurse to an early insulin reaction?

A client is scheduled for routine glycosylated hemoglobin (HbA1c) test. What is important for the nurse to tell the client before this test?

A client has been inhalation vasopressin therapy. What will the nurse evaluate to determine the therapeutic response to this medication?

A client with diagnosis of type 2 diabetes has been ordered a course of prednisone for her severe arthritic pain. An expected change that requires close monitoring by the nurse is

The nurse performing an assessment on a client who has been receiving long-term steroid therapy

would expect to find

A diabetic client receives a combination of regular and NPH insulin at 0700 hours. The nurse teaches the client to be alert for signs of hypoglycemia at

It is important for the nurse to teach the client that metformin (Glucophage)

A nurse assessing a client with SIADH would expect to find laboratory values of

A priority nursing diagnostic for a client admitted to the hospital with a diagnosis of diabetes insipidus is

A client admitted with a pheochromocytoma returns from the operating room after adrenalectomy. The nurse should carefully assess this client for

When caring for client in thyroid crisis, the nurse would question an order for

A client is prescribed levothyroxine (Synthroid) daily. The most important instruction to give the client for administration of this drug is

The nurse would question which medication order for a client with acute-angled glaucoma?

A client tells you she has heard that glaucoma may be a hereditary problem and she is concerned about her adult children. What is the best response?

What will be important to include in the nursing care for the client with angle-closure glaucoma?

A child is scheduled for a myringotomy. What goal of this procedure will the nurse discuss with the parents?

After a client's eye has been anesthetized, what instructions will be important for the nurse to give the client?

A child diagnosed with conjunctivitis. Which statement reflects that the child understood the nurse's teaching?

What medication would the nurse anticipate giving a client with Meniere's disease?

When teaching a family and a client about the use of a hearing aid, the nurse will base the teaching on what information regarding the hearing aid?

What statement by the client recovering from cataract surgery would indicate to the nurse need for additional teaching?

A client is walking down the hall and begins to experience vertigo. What is the most important nursing action when this occurs?

To promote and maintain safety for a client after a stapedectomy. What would be included in the nursing care plan?

The nurse would question the administration of which eye drop in a patient with increased ICP?

A client is being admitted for problems with Meniere's disease. What is most important to the nurse to assess?

A client calls the nurse regarding an accident that just occurred during which an unknown chemical was splashed in his eyes. What is the most important for the nurse to tell the client to do immediately?

A 25-year old woman comes to the clinic complaining of dizziness, weakness and palpitations. What will be important for the nurse to initially evaluate when obtaining the health history?

A child with leukemia is being discharged after beginning chemotherapy. What instructions will the nurse include in the teaching plan for the parents of this child?

Which client is most likely to have iron deficiency anemia?

A client has an order for one unit of whole blood. What is a correct nursing action?

The nurse is caring for a client who is receiving a blood transfusion. The transfusion was started 30 mins ago at a rate of 100 ml/hr. The client begins to complain of low back pain and headache and is increasing restless, what is the first nursing action?

The nurse is preparing to start an IV infusion before the administration of a unit of packed red blood cells, what fluid will the nurse select to maintain the infusion before hanging the unit of blood?

A client in sickle cell crisis is admitted to the emergency department what are the priorities of care?

A client in the ICU has been diagnosed with DIC. The nurse will anticipate administering which of the following fluids?

The nurse is assessing a client who has been given a diagnosis of polycythemia vera. What characteristics will the nurse anticipate finding when assessing this client?

A client has been diagnosed with pernicious anemia what will the nurse teach this client regarding medication he will need to take after he goes home?

First postop day after a right lower lobe (RLL) lobectomy, the client breathes and coughs but has difficulty raising mucus. What indicates that the client is not adequately clearing secretions?

What nursing observations indicate that the cuff on an endotracheal tube is leaking?

The client with COPD is to be discharged home while receiving continuous oxygen at a rate of 2 L/min via cannula. What information does the nurse provide to the client and his wife regarding the use of

oxygen at home?

The wife of a client with COPD is worried about caring for her husband at home. Which statement by the nurse provides the most valid information?

Which statement correctly describes suctioning through an endotracheal tube
