NMC CBT MOCK TEST ABOUT WOUND - NMC CBT MOCK TEST ABOUT WOUND by UK Registered Nurse 9,954 views 8 months ago 19 minutes - The New NMC CBT **test**, of competence proficiencies explained in this video will help each newly registered **nurse**, acquire ...

Intro

How long does the 'inflammatory phase' of wound healing typically last? a 24 hours b Just minutes c 1-5 days d 3-24 days

A new, postsurgical wound is assessed by the nurse and is found to be hot, tender and swollen. How could this wound be best described?

Hemostasis is the process of the wound being closed by clotting. Hemostasis starts when blood leaks out of the body. The first step of hemostasis is when blood vessels constrict to restrict the blood flow. Next, platelets stick together in order to seal the break in the wall of the blood vessel

What functions should a dressing fulfil for effective wound healing? a High humidity, insulation, gaseous exchange, absorbent. b Anaerobic, impermeable, conformable, low humidity. c Insulation, low humidity, sterile, high adherence. d Absorbent, low adherence, anaerobic, high humidity

How would you care for a patient with a necrotic wound? a Systemic antibiotic therapy and apply a dry dressing b Debride and apply a hydrogel dressing. c Debride and apply an antimicrobial dressing. d Apply a negative pressure dressing

Sharp debridement may cause trauma to underlying structures, the procedure should only be carried out by: a A health care assistant on working full time b A qualified nurse with at least 3 years experience c A doctor of any type of speciality d A qualified healthcare professional with appropriate training

You are carrying out wound dressing with a new product, what is your intervention as a nurse?

b. Do not remove the previous dressing and apply the new products over it c. Refer to another practitioner for patient's safety until you gain your competency and skills. d. Leave the dressing without doing it
