Aircraft Landing Gear Systems (Aviation Maintenance Technician Handbook Airframe Ch.13) -

Aircraft Landing Gear Systems (Aviation Maintenance Technician Handbook Airframe Ch.13) by

Phillip J. Murphy 9,847 views 3 years ago 3 hours, 13 minutes - Chapter 13 **Aircraft**, Landing Gear

Systems Landing Gear Types **Aircraft**, landing gear supports the entire weight of an **aircraft**, ...

prevents ground looping of the aircraft

directed through mechanical linkage to the rudder pedals

retract and stow the landing gear

streamline the airflow past the protruding assemblies

keeping parasite drag to a minimum retractable landing gear

designed with rigid welded steel landing gear struts

controlled by the taper of the metering pin in the orifice

attach the strut to the airframe figure

installed in the open end of the outer cylinder

provided with a locating cam assembly

check the fluid level

re-inflating the strut

check the swivel nut for tightness

loosen the swivel nut

rotate the swivel nut one turn counterclockwise using a tool

rotate the swivel nut

unscrewing the valve body from the strut

inflate the strut

insert the free end of the hose into a container

compress and extend the strut fully by raising and lowering the jack

keeps the lower strut cylinder from rotating out of alignment

use shims between the two arms of the torque links

extends and retracts the landing gear by operating the lever

release the mechanical down locks

put in the gear down position pressurized

extend the gear fluid

prevent the gear from retracting or collapsing

energizes and retracts the lock pin from the selector handle

located on the instrument panel adjacent to the gear selector handle

aligns the gear for retraction

incorporate an external roller or guide pin on the strut

inspect landing gear wheels for cleanliness corrosion

lubricate the landing gear including the nose wheel

dry the bearing by directing a blast of dry air between the rollers

adjusting landing gear latches

engage the latch hook with a door roller cables
adjusted by loosening its mounting bolts and raising or lowering the latch
adjusted by placing a serrated hinge with an elongated mounting hole
lock a landing gear in the down position
locks the gear securely in the down position
checked by performing a landing gear retraction
checked whenever swinging the gear retraction tests
check the landing gear for proper extension and retraction
check the landing gear doors for clearance
check landing gear linkage for proper operation
connect through a shaft to a steering drum
provides the hydraulic power for turning the nose gear
connects to the nose steering spindle on the nose gear shock
stop the gear at the selected angle
move the metering valve back toward the neutral
keeps fluid in the steering cylinders pressurized
support the entire weight of the aircraft during taxi
bolting the brake rotor to the inner well half
assist in protecting the wheel and tire assembly from overheating
mount the wheel spin transducer
inspect the landing gear including the wheels tires
examine the wheels
prevents the bearing from properly accepting the weight load of the aircraft
removing air from the tire
loosening the tire from the wheel rim
pry a tire off of the rim with a screwdriver
remove the wheel bearing
clean the wheel halves with the solvent recommended
rotate the bearing while drying with compressed air
install and torque bearings into place
remove any contaminants from inside the bearing
check the wheel brake
tie bolt inspection
follow the maintenance manual procedures for inspecting tie bolts
removed when cleaning and inspecting the wheel
accomplished by bolting the disc rigidly to the wheel
require the use of multiple disc brakes
exits the brake to the return line through an automatic adjuster
slowing the rotation of the wheels on large and high performance aircraft
sandwiched under hydraulic pressure against the backing plate
be held stationary by the torque tube spines
using a pin grip assembly for auto adjustment
dissipate the frictional heat of braking in a quick safe manner
return the expander tube to a flat position around the flange
delivering the required hydraulic fluid pressure
push the brake linings against the brake rotor
moved forward into the master cylinder
engaged by pulling the parking brake handle
piston rod
moves a spool valve in the cylinder
create a force on the brake input shaft movement
feed two separate brake assemblies
traps the fluid in the brakes holding the rotor stationary
returning the piston to the ready position
relieves pressure to the brake pistons of the wheel
