Syllabus of Laboratory Work for Students in the Histological Laboratory of the University of Michigan ...

In v.1-8 the final number consists of the Commencement annual.

Directions for Work in Histological Laboratory

Excerpt from Directions for Work in the Histological Laboratory: More Especially Arranged for the Use of Classes in the University of Michigan The subject matter of the first part of these laboratory notes has been almost entirely rewritten; the lessons have been rearranged; some few of the exercises outlined in the first edition, have been replaced by others, and many new ones added. The course, as now outlined, covers the essentials Of normal histology. The second part has been amplified, and many new methods added. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an

important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

Practical Pathology for Students and Physicians

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

The new edition of this well-received text provides students with concise, current coverage of cell and molecular biology and classic morphology. It features a wealth of superb illustrations, including full-color light photomicrographs, electron micrographs, schematic diagrams, and drawings. Helpful tables summarize vital information for at-a-glance understanding, and summary statements highlight key material in each chapter.

Directions for Work in the Histological Laboratory, More Especially Arranged for the Use of Classes in the University of Michigan

Designed for introductory courses in human anatomy, this text assumes no previous study of the human body. Instead, this book helps to facilitate a basic understanding of this broad discipline by presenting data, unified concepts and vocabulary in a manner that is easy for students to understand. Although the focus is on anatomy, links are made between structures and functions to help students understand anatomical concepts. The understanding of structure and function is further enhanced by considering defects and disorders in clinical settings. Organized by systems rather than regions, each chapter of this seventh edition has been revised. This text's coverage of the human anatomy is now complemented by new features, including questions with figures, colour anatomy photographs, improved readability, phonetic pronunciations, and more exhibits.

Accessible Elements informs science educators about current practices in online and distance education: distance-delivered methods for laboratory coursework, the requisite administrative and institutional aspects of online and distance teaching, and the relevant educational theory. Delivery of university-level courses through online and distance education is a method of providing equal access to students seeking post-secondary education. Distance delivery offers practical alternatives to traditional on-campus education for students limited by barriers such as classroom scheduling, physical location, finances, or job and family commitments. The growing recognition and acceptance of distance education, coupled

with the rapidly increasing demand for accessibility and flexible delivery of courses, has made distance education a viable and popular option for many people to meet their science educational goals.

Bulletin of the Bureau of Fisheries

Excerpt from Bulletin of the United States Bureau of Fisheries, Vol. 37: 1919-1920 The present study of the chinook salmon (*Oncorhynchus tshawytscha*), of which this paper forms the first contribution, was started in the summer of 1914 at the instance of the U.S. Bureau of Fisheries. The importance and necessity of such a study had been made apparent, especially by the work of Gilbert on the sockeye salmon, and it seemed advisable to extend in detail the outline of the life history of the chinook as given by Gilbert (1913). The method employed - that of analysis on the basis of scale studies - is now too well known and too widely used to need description. The paper just cited and subsequent studies of the sockeye by the same author contain a complete description of the methods employed and form admirable examples of studies prosecuted on this basis. Our knowledge of the life histories of all the Pacific coast Salmonidae was distinctly unsatisfactory previous to the discovery of the value of scale studies. The descriptions given by Jordan and Evermann (1896-1900), Jordan (1905), Rutter (1903), Scofield (1898), and Chamberlain (1907), contain the most accurate information regarding the chinook which was available prior to Gilbert's first study. The general features of the early life in fresh water and of the seaward migration were well known, and Chamberlain had shown quite conclusively that

the sockeye and chinook salmon mature commonly at about the fourth year, although this is subject to variation. The work of McMurrich (1912) on the chinook salmon, based on the scales, has been shown by Gilbert (1913) to be unreliable because of the small number of specimens examined and an incorrect interpretation of the central (nuclear) area of the scales. It remained, therefore, for Gilbert (1913) to give us the first accurate description of the general features of the life history of the chinook salmon in his paper, "The Age at Maturity of the Pacific Coast Salmon of the genus *Oncorhynchus*." In this he shows, among other things, that: (a) The chinook, or king, salmon spawn normally either in the fourth, fifth, sixth, or seventh year, the females more frequently in the fourth year; (b) the "grilse" are exclusively males and are of two sizes, representing two and three year fish; (c) the young may migrate as fry soon after hatching, or may remain in the stream until their second spring, migrating as yearlings; and (d) among the fish of any given age, the larger specimens will be those which migrated seaward as fry, although these do not attain the average stature of those fish, one year older, which migrated as yearlings.
