# Patient Participation In Cancer Clinical Trials A Pilot Test Of Lay Navigation

**#Cancer clinical trials #Patient participation #Lay navigation #Oncology research #Trial enrollment**

This pilot study investigates the impact of lay navigation on patient participation in cancer clinical trials. By employing lay navigators, the research aims to understand whether personalized support and guidance can improve enrollment rates and overall patient engagement within the complex process of cancer research. The findings will shed light on the potential benefits of implementing lay navigation strategies to overcome barriers and increase access to potentially life-saving treatments offered through clinical trials.
