Find New Limits

We Are Going To Have One over Six Times and the Antiderivative of U to the One-Half Is U to the Three over Two Times the Reciprocal We Just Flip the New Exponent and this Is Going from Nine to One and Remember Two over Six We Can Reduce to One Third So Now We'Re Left with $1/9$ and Now We Plug in the Limits We'Re Going To Have 9 to the 3 over 2 Minus 1 to the 3 over 2 So Then To Simplify this Expression Here We Have $1/9$

We'Re Going To Have 9 to the 3 over 2 Minus 1 to the 3 over 2 So Then To Simplify this Expression Here We Have $1/9$ and 9 to the 3 Over to the Square Root of 9 Is 3 3 to the Third Is 27 1 to any Power Is 1 and this Is Going To Give Us 26 over 9 Which Is Choice a for this Problem Okay Now the Last Question Here We'Re Going to We Have $f(x)$ Is Tangent at $2x$ and We Need To Find $f'(x)$

at π over 6

Okay Now the Last Question Here We're Going to We Have f of x Is Tangent at $2x$ and We Need To Find f' at π over 6 so the First Thing We Should Do Is Take the Derivative of Tangent to x and the Derivative of Tangent Is Secant Squared We Leave the inside the Same but We Have To Use Chain Rule Multiplied by the Derivative of $2x$ Which Is 2 but Then When You Get to this Stage Here You'll Be Surprised How Many Students Forget the Trigonometry for this So Please Don't Let this Be the Part That Gets You Will Be Very Sad It'll Be a Very Sad Day at the Office if You Get this Far and Then this Is Where You Mess Up So When You Plug in π over 6 2 Times π over 6
