Subsystems interact with each other and their interactions make up for a function of system.

LUDWIG VON BERTALANFFY What he created and what is his importance

Bertalanffy created a hierarchical model of universe

Universe can be described in a hierarchical way by means of systems and subsystems Subsystems make up for a structure of system • Interactions among subsystems make up for a function of system

Hierarchical description of universe is one of the most important scientific tools leading directly to

understanding of basic principles of universe. (postulated by me)

Game theory spent much of its early days analyzing zero sum games and trying to figure out what's the best strategy.

In such a situation often times the best strategy is very counterintuitive, because it involves flipping a coin or rolling a dice or doing something random.

The nice thing about these random strategies is that they ensure that your opponent can never outthink you.

Vitamins and Hormones

First published in 1943, Vitamins and Hormones is the longest-running serial published by Academic Press. In the early days of the serial, the subjects of vitamins and hormones were quite distinct. The Editorial Board now reflects expertise in the field of hormone action, vitamin action, X-ray crystal structure, physiology, and enzyme mechanisms. Under the capable and qualified editorial leadership of Dr. Gerald Litwack, Vitamins and Hormones continues to publish cutting-edge reviews of interest to endocrinologists, biochemists, nutritionists, pharmacologists, cell biologists, and molecular biologists. Others interested in the structure and function of biologically active molecules like hormones and vitamins will, as always, turn to this series for comprehensive reviews by leading contributors to this and related disciplines.

Vitamins and Hormones

First published in 1943, Vitamins and Hormones is the longest-running serial published by Academic Press. In the early days of the Serial, the

subjects of vitamins and hormones were quite distinct. Now, new discoveries have proved that several of the vitamins function as hormones and many of the substances inferred by the title of the serial function in signal transduction processes. Accordingly, the Editor-in-Chief has expanded the scope of the serial to reflect this newer understanding of function-structure relationships in cellular communication. The Editorial Board now reflects expertise in the field of hormone action, vitamin action, X-ray crystal structure, physiology, and enzyme mechanisms.

Why is This Important to the Counselor Patients often interpret a systemic failure (what we don't know or understand) as a personal failure ' low self esteem, depression, guilt, shame Less than 30% of people who try to stop an addiction succeed for more than 30 days Less than half of patients who begin medication do not have positive results.

Addiction and mental health issues are diseases with symptoms and are incurable and progressive. Strengths As a disease it provides hope of being treatable Removes societal stigma Relieves feelings of guilt and shame

Implications for prevention and treatment Recognizes that changes within the brain are present in the majority of persons with symptoms of addictions or CO-occurring disorders. Clients address those biological Issues through

Addiction and mood disorders are caused by a lack of will power or moral degradation (gluttony, sloth) Willpower, motivation and determination to live by spiritual/moral principles are sufficient for recovery

Strengths Emphasizes personal responsibility for choices and Treatment and Prevention Implications Enhance triggers and reinforcement frequency and intensity for alternate behaviors Identify and reduce reinforcing properties of undesired behaviors Reduce punishing properties of the new behaviors.

There are a variety of theories of the development of addiction and mental health issues Research has indicated that people with addictions, like those with mental health issues have differences in brain structure or the amount or ratio of neurochemicals available. No singular theory can reliably explain/predict why some people develop addiction or mental health issues and others do not. Research has indicated that biology, environment, culture, social relationships and cognitions are all involved in the development and maintenance of mental health and/or addictive issues It is unknown which factors are causative and which occur as the result of pre-existing issues. Treatment involves assessing the enviropsiychsocial condition of the individual and defining what will help him or her manage the presenting symptoms.
