The Digestibility of the Food Varies

She Found that the Cooked Was Much More Digestible than the Raw and these Are Not Trivial Differences this Was 100 Percent Difference or Something and It Didn't Matter about the Different Kinds of Meat and Then I Just Last Year a Student of Mine Rachel Carr Modi Did a Wonderful Experiment and the Amazing Thing about this Experiment Is that We Can't Find Anybody Who

Has Published an Experiment like this There's an Extraordinary Lack of Interest Actually that Wilma Clifford Paper Here Published in 1930 That Was Commented On in the Lancet And There Are Three Different Layers of It before You Finally Get to the Tendon Gastrointestinal Physiologists if You Want To Go and Find Out about Meat Digestion You Might Think that Books Entitled Things like the the Gastrointestinal Physiology of Digestion Would Be Helpful and They'Re Terrific if You Can Completely Ignore Physical Structure They Assume that What Goes into the Stomach Is a Nice Solution of Proteins They Do Not Treat Meat as a Thing That Goes into the Stomach I Challenge You To Find a Textbook That Does and that Means that We Don't Know Anything about the Effects of Cooking on Me because People Haven't Studied

Because You'Re Spending Less Energy To Eat It Which Means that You Shouldn't Have To Have Such a Big Sleep after Eating Cooked Meal as Opposed to a Raw Meal and that Is Probably Why Repeatedly in Hunters and Gatherers You Find that Animal Flesh Is both Pounded and Cooked When Meat Is So Tender that Sinews Will Fall Apart It's Crushed in a Mortar so What We Know Is that Where We've Got the Really High Quality Studies There Is a Very Big Effect of Cooking on Energy Contrary to What We Are as It Were Told
