Enjoy this classic work today. These selected paragraphs distill the contents and give you a quick look inside Animal Intelligence - The International Scientific Series, Vol. XLIV.: Look inside the book: Second, in the case of the name being unknown, and the alleged fact of sufficient importance to be entertained, carefully to consider whether, from all the circumstances of the case as recorded, there was any considerable opportunity for mal-observation; this principle generally demanded that the alleged fact, or action on the part of the animal, should be of a particularly marked and unmistakable kind, looking to the end which the action is said to have accomplished. ix Third, to tabulate all important observations recorded by unknown observers, with the view of ascertaining whether they have ever been corroborated by similar or analogous observations made by other and independent observers. ... This is obvious, because, as I have already observed, the only evidence we can have of objective mind is that which is furnished by objective activities; and as the subjective mind can never become assimilated with the objective so as to learn by direct feeling the mental processes which there accompany the objective activities, it is clearly impossible to satisfy any one who may choose to doubt the validity of inference, that in any case other than his own mental processes ever do accompany objective activities. ... Common sense, however, universally feels that analogy is here a safer guide to truth than the sceptical demand for impossible evidence; so that if the objective existence of other organisms and their activities is granted—without which postulate comparative psychology, like all the other sciences, would be an unsubstantial dream—common sense will always and without question conclude that the activities of organisms other than our own, when

analogous to those activities of our own which we know to be accompanied by certain mental states, are in them accompanied by analogous mental states.

Anthropology

The book focuses on the novel and unexplored research area of intersection between science, technology, and innovation and international affairs. The main objective of this book is to offer an original theoretical, analytical, and methodological framework that provides a wide comprehensive map of the current reality of science, tech, and innovation in the world system at the beginning of the twenty-first century. The book is based on 10 years of research work in the strategic intersection between science, technology, and innovation and international relations, and offers new explanations about three main issues: (1) the role of science, tech, and innovation in the current international system, (2) the new configuration of international scientific relations, and (3) the impact and consequences of science, technology, and innovation in the world order of the twenty-first century.
