World Development Report 1978

This first report deals with some of the major development issues confronting the developing countries and explores the relationship of the major trends in the international economy to them. It is designed to help clarify some of the linkages between the international economy and domestic strategies in the developing countries against the background of growing interdependence and increasing complexity in the world economy. It assesses the prospects for progress in accelerating growth and alleviating poverty, and identifies some of the major policy issues which will affect these prospects.

Re-Engineering the Chemical Processing Plant

The first guide to compile current research and frontline developments in the science of process intensification (PI), *Re-Engineering the Chemical Processing Plant* illustrates the design, integration, and application of PI principles and structures for the development and optimization of chemical and industrial plants. This volume updates professionals on emerging PI equipment and methodologies to promote technological advances and operational efficacy in chemical, biochemical, and engineering environments and presents clear examples illustrating the implementation and application of specific process-intensifying equipment and methods in various commercial arenas.

Research Report

Aline Leon In the last years, public attention was increasingly shifted by the media and world governments to the concepts of saving energy, reducing pollution, protecting the environment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact, the energy stored in hydrocarbon-based solid, liquid, and gaseous fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agriculture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2.3 billion in 1939 to 6.5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources: This means that since the first barrel of petroleum has been pumped out from the ground, we have been exhausting a heritage given by nature.

The Expert Committee on Specifications for Pharmaceutical Preparations works towards clear independent and practical standards and guidelines for the quality assurance of medicines. Standards are developed by the Committee through worldwide consultation and an international consensus building process. The following new guidelines were adopted and recommended for use: Procedure for development of the WHO medicines quality assurance guidelines; Guidelines on Good Manufacturing Practices (GMP) for heating ventilation and air-conditioning systems (HVAC) ? illustrative part; Guidance on GMP for Validation including the general main text analytical procedure validation validation of computerized systems and qualification; in the area of interchangeability of multisource medicines: the Proto-

col to conduct equilibrium solubility experiments for the purpose of biopharmaceutics classification systembased classification of active pharmaceutical ingredients for biowaiver; Guidelines on Import Procedures for pharmaceutical products; and the Good Practice Guidance document on implementing the collaborative procedures. All of the above are included in this report and recommended for implementation.

Life Cycle Assessment (LCA)

Based on first-hand experience with companies such as Volvo, BP, Proctor and Gamble, ICI and Fuji Xerox, Elkington defines the triple bottom line of 21st century business as profit, environmental sustainability and social responsibility.

For nearly a century, scientific advances have fueled progress in U.S. agriculture to enable American producers to deliver safe and abundant food domestically and provide a trade surplus in bulk and high-value agricultural commodities and foods. Today, the U.S. food and agricultural enterprise faces formidable challenges that will test its long-term sustainability, competitiveness, and resilience. On its current path, future productivity in the U.S. agricultural system is likely to come with trade-offs. The success of agriculture is tied to natural systems, and these systems are showing signs of stress, even more so with the change in climate. More than a third of the food produced is unconsumed, an unacceptable loss of food and nutrients at a time of heightened global food demand. Increased food animal production to meet greater demand will generate more greenhouse gas emissions and excess animal waste. The U.S. food supply is generally secure, but is not immune to the costly and deadly shocks of continuing outbreaks of food-borne illness or to the constant threat of pests and pathogens to crops, livestock, and poultry. U.S. farmers and producers are at the front lines and will need more tools to manage the pressures they face. Science Breakthroughs to Advance Food and Agricultural Research by 2030 identifies innovative, emerging scientific advances for making the U.S. food and agricultural system more efficient, resilient, and sustainable. This report explores the availability of relatively new scientific developments across all disciplines that could accelerate progress toward these goals. It identifies the most promising scientific breakthroughs that could have the greatest positive impact on food and agriculture, and that are possible to achieve in the next decade (by 2030).

Reputation

This report presents both short- and long-term approaches to the problem of marine plastic debris and micro plastics. It provides an overview of the latest science and experiences, identifies priority areas of action, and points out areas requiring more research. Improved waste management is urgently needed to reduce the flow of plastic into our oceans.

Distinction

City distribution plays a key role in supporting urban lifestyles, helping to serve and retain industrial and trading activities, and contributing to the competitiveness of regional industry. This book aims to improve knowledge in this area by recognizing and evaluating the problems within the urban freight transport system.

In the dynamic business environment of today, Information Technology (IT) organizations face challenges around scalability and performance. This IBM® Redbooks® publication is targeted for IT architects, IT personnel, and developers who are looking to integrate caching technologies, specifically elastic caching, into their business environment to enhance scalability and performance. Although it is helpful to know caching technologies, an introduction to caching technologies in general is included. In addition, technical details are provided about implementing caching by using several IBM products. The IBM WebSphere® eXtreme Scale product provides several functions to enhance application performance and scalability. It provides distributed object caching functionality, which is essential for elastic scalability and next-generation cloud environments. It helps applications process massive volumes of transactions with extreme efficiency and linear scalability. By using the scalable in-memory data grid, enterprises can benefit from a powerful, high-performance elastic cache. The IBM WebSphere DataPower® XC10 Appliance enables your business-critical applications to scale cost effectively with consistent performance by using elastic caching in a purpose-built, easy-to-use appliance. This publication explains the benefits of using various caching techniques in your enterprise, specifically involving the use of IBM WebSphere eXtreme Scale and the IBM WebSphere DataPower XC10 Appliance. Three real-world scenarios are described that use these enterprise caching technologies to solve issues that face the businesses of today.

City Distribution and Urban Freight Transport

Companies like Google and Apple heralded the information revolution, and opened the doors for Silicon Valley to grow into an engine of dazzling technological development, that today champions the free market that engendered it against the supposedly stifling encroachment of government regulation. But is that really the case? In this sharp and controversial expose, *The Entrepreneurial State*, Mariana Mazzucato debunks the pervasive myth that the state is a laggard, bureaucratic apparatus at odds with a dynamic private sector. Instead she reveals in case study after case study that, in fact, the opposite is true: the state is our boldest and most valuable innovator. The technology revolution would never have happened without support from the US Government. The breakthroughs--GPS, touch-screen displays, the Internet, and voice-activated AI--that enabled legendary Apple products to be smart successes were, in fact, all developed with support from the state. Mazzucato reveals that many successful entrepreneurs like Steve Jobs integrated state-funded technological developments into their products and then reaped the rewards themselves. The algorithm behind Google's search engine was initially sponsored by NASA. And 75% of NMEs--new, often-ground-breaking drugs not derivative of existing substances--trace their research to National Institutes of Health (NIH) labs. The American government, it turns out, has been enormously successfully at stimulating scientific and technological advancement. But by 2009, just some months following the Great Recession--the US government, constrained by austerity measures, started disinvesting from its holdings in research fields like health, energy, electronics. The trend is likely to continue, and the repercussions of these policies could wreak havoc on our technology and science sectors. But Mazzucato remains optimistic. If managed correctly, state-sponsored development of Green technology, for instance, could be as efficacious as suburbanization & post-war reconstruction in the mid-twentieth century, and unleash a wide-spread golden age in the global economy. The limitations of natural resources and the threat of global warming could become the most powerful driver of growth, employment, and innovation within just one generation--but to be successful, the Green Revolution will depend on the initiatives of proactive governments. By not admitting the State's role in economic and technological progress, we are socializing only the risks of investing in innovation, while privatizing the rewards in the hands of only a few businesses. This, Mazzucato argues, hurts both future of innovation and equity in modern-day capitalism. For policy-makers, Silicon Valley start-up founders, venture-capitalists, and economists alike, *The Entrepreneurial State* stirs up much needed debate and offers up a brilliant corrective to spurious beliefs: to thrive, American businesses have always and will need to depend on the support of our country's most audacious entrepreneur, the state.

Education for Sustainable Development (ESD) is globally acknowledged as a powerful driver of change, empowering learners to make decisions and take actions needed to build a just and economically viable society respect ful of both the environment and cultural diversity.

The Entrepreneurial State

Like many countries, the United Kingdom has been hit severely by the COVID-19 outbreak. A strict lockdown was essential to contain the pandemic but halted activity in many key sectors. While restrictions have eased, the country now faces a prolonged period of disruption to activity and jobs, which risks exacerbating pre-existing weak productivity growth, inequalities, child poverty and regional disparities. On-going measures to prevent a second wave of infections will need to be carefully calibrated to manage the economic impact.

Issues and trends in education for sustainable development

Sustainability is based on a simple and long-recognized factual premise: Everything that humans require for their survival and well-being depends, directly or indirectly, on the natural environment. The environment provides the air we breathe, the water we drink, and the food we eat. Recognizing the importance of sustainability to its work, the U.S. Environmental Protection Agency (EPA) has been working to create programs and applications in a variety of areas to better incorporate sustainability into decision-making at the agency. To further strengthen the scientific basis for sustainability as it applies to human health and environmental protection, the EPA asked the National Research Council (NRC) to provide a framework for incorporating sustainability into the EPA's principles and decision-making. This framework, Sustainability and the U.S. EPA, provides recommendations for a sustainability approach that both incorporates and goes beyond an approach based on assessing and managing the risks posed by pollutants that has largely shaped environmental policy since the 1980s. Although risk-based methods have led to many successes and remain important tools, the report concludes that they are not adequate to address many of the complex problems that put current and future generations at risk, such as depletion of natural resources, climate change, and loss of biodiversity. Moreover, sophisticated tools are increasingly available to address cross-cutting, complex, and challenging issues that go beyond risk management. The report recommends that EPA formally adopt as its sustainability paradigm the widely used "three pillars" approach, which means considering the environmental, social, and economic impacts of an action or decision. Health should be expressly included in the "social" pillar. EPA should also articulate its vision for sustainability and develop a set of sustainability principles that would underlie all agency policies and programs.

OECD Economic Surveys: United Kingdom 2020

Digital technologies are spreading rapidly, but digital dividends--the broader benefits of faster growth, more jobs, and better services--are not. If more than 40 percent of adults in East Africa pay their utility bills using a mobile phone, why can't others around the world do the same? If 8 million entrepreneurs in China--one third of them women--can use an e-commerce platform to export goods to 120 countries, why can't entrepreneurs elsewhere achieve the same global reach? And if India can provide unique digital identification to 1 billion people in five years, and thereby reduce corruption by billions of dollars, why can't other countries replicate its success? Indeed, what's holding back countries from realizing the profound and transformational effects that digital technologies are supposed to deliver? Two main reasons. First, nearly 60 percent of the world's population are still offline and can't participate in the digital economy in any meaningful way. Second, and more important, the benefits of digital technologies can be offset by growing risks. Startups can disrupt incumbents, but not when vested interests and regulatory uncertainty obstruct competition and the entry of new firms. Employment opportunities may be greater, but not when the labor market is polarized. The internet can be a platform for universal empowerment, but not when it becomes a tool for state control and elite capture.

The World Development Report 2016 shows that while the digital revolution has forged ahead, its 'analog complements'--the regulations that promote entry and competition, the skills that enable workers to access and then leverage the new economy, and the institutions that are accountable to citizens--have not kept pace. And when these analog complements to digital investments are absent, the development impact can be disappointing. What, then, should countries do? They should formulate digital development strategies that are much broader than current information and communication technology (ICT) strategies. They should create a policy and institutional environment for technology that fosters the greatest benefits. In short, they need to build a strong analog foundation to deliver digital dividends to everyone, everywhere.

Excreta and wastewater sludge are resources. Finding ways to put them to their best uses is part of developing sustainable human communities. But if not managed properly, excreta and sludge can be dangerous to human health and the environment. How to integrate these opposing concepts is an ongoing worldwide challenge. This Atlas provides examples of how this challenge is addressed around the globe. The 59 reports provide insights into the similarities and differences in the management of excreta, wastewater, and biosolids in 37 countries. This compilation of information includes specific information from 19% of the member states of the United Nations, and includes representation of diverse countries and the full spectrum of management programs.

World Development Report 2016

This report gives an overview of the household services sector in the European Union, showing how the transformation of unpaid work traditionally carried out in the home is increasingly seen by policy makers as having potential for job creation. It looks at the current experiences of paid workers and examines trends, policies and best practice in this domain. Five main spheres are covered: childcare, eldercare, domestic cleaning, home maintenance and catering. The findings are drawn from research carried out in eight Member States: Austria, Finland, France, Germany, Italy, the Netherlands, Portugal and the United Kingdom. The report addresses concerns about the quality of employment and working conditions in household services, as well as implications for equal opportunities and social inclusion. The conclusions present a sound basis for future policy initiatives in this field, which would lead to improved working conditions and training and career prospects for workers, as well as the provision of better quality services.

Prepared by government experts from all 46 member states of the Council of Europe, this publication seeks to help promote a better understanding of the relationship between human rights and environmental issues by setting out details of relevant case-law of the European Court of Human Rights and the principles upon which these judgements are based. These include: the right to life (Article 2), the right to respect for family life (Article 8), the right to a fair trial and access to a court (Article 6) and the right to receive and impart information and ideas (Article 10) of the European Convention on Human Rights.

Global Atlas of Excreta, Wastewater Sludge, and Biosolids Management

"The Corona crisis and the Need for a Great Reset" is a guide for anyone who wants to understand how COVID-19 disrupted our social and economic systems, and what changes will be needed to create a more inclusive, resilient and sustainable world going forward. Thierry Malleret, founder of the Monthly Barometer, and Klaus Schwab, founder and executive Chairman of the World Economic Forum, explore what the root causes of these crisis were, and why they lead to a need for a Great Reset. Theirs is

a worrying, yet hopeful analysis. COVID-19 has created a great disruptive reset of our global social, economic, and political systems. But the power of human beings lies in being foresighted and having the ingenuity, at least to a certain extent, to take their destiny into their hands and to plan for a better future. This is the purpose of this book: to shake up and to show the deficiencies which were manifest in our global system, even before COVID broke out.

The Smart Money Woman—An African girl's journey to financial freedom Meet Zuri. She's living a fabulous life. Great car, gorgeous apartment, well paid job. Meet Zuri. Broken down car, an apartment she can't afford, a job she's about to lose. What's a broke girl to do? With her best friends Tami (the flighty fashion designer), Lara (the tough oil and gas executive), Adesuwa (the conservative lawyer), and Ladun (the fabulous housewife), Zuri grows a little, learns a lot and navigates her way to making better financial decisions and building wealth. This book tackles, debt, spending, the consumerist culture of the African middle class, the fear and misconceptions surrounding money and the lack of it, love, friendships, cultural and societal pressures and the roles they play in success. With each chapter comes a Smart Money Lesson, there to help you work your way up the financial ladder.

Bulletin of the Atomic Scientists

Vaccinate children against deadly pneumococcal disease, or pay for cardiac patients to undergo life-saving surgery? Cover the costs of dialysis for kidney patients, or channel the money toward preventing the conditions that lead to renal failure in the first place? Policymakers dealing with the realities of limited health care budgets face tough decisions like these regularly. And for many individuals, their personal health care choices are equally stark: paying for medical treatment could push them into poverty. Many low- and middle-income countries now aspire to universal health coverage, where governments ensure that all people have access to the quality health services they need without risk of impoverishment. But for universal health coverage to become reality, the health services offered must be consistent with the funds available—and this implies tough everyday choices for policymakers that could be the difference between life and death for those affected by any given condition or disease. The situation is particularly acute in low- and middle income countries where public spending on health is on the rise but still extremely low, and where demand for expanded services is growing rapidly. What's In, What's Out: Designing Benefits for Universal Health Coverage argues that the creation of an explicit health benefits plan—a defined list of services that are and are not available—is an essential element in creating a sustainable system of universal health coverage. With contributions from leading health economists and policy experts, the book considers the many dimensions of governance, institutions, methods, political economy, and ethics that are needed to decide what's in and what's out in a way that is fair, evidence-based, and sustainable over time.

Cleaner Production is an emerging field of research that comprises concepts and methodologies from different disciplines in a problem-oriented manner. Research efforts are often concentrated in a variety of sectoral domains; and, for understanding the global change which embraces a variety of processes on several scales, a variety of environmental and sustainability aspects can be addressed. This book brings contributions from researchers that participated in editions of the International Workshop Advances in Cleaner Production (www.advancesincleanerproduction.net) held in São Paulo, Brazil. The book includes contributions from researchers from various countries for the development of Cleaner Production. Divided into three sections, the book addresses national experiences for the implementation of CP programs, research related to the metrics used to assess the effects of CP initiatives in the production sector and discussions that emerge before and after the implementation of these programs. Methodological approaches presented can be useful in the design and management of production systems, for policy development, environmental risk reduction, and prevention/mitigation strategies.

Fair Society, Healthy Lives

At the end of the Second World War, a growing concern that Canadians' civil liberties were not adequately protected, coupled with the international revival of the concept of universal human rights, led to a long public campaign to adopt a national bill of rights. While these initial efforts had been only partially successful by the 1960s, they laid the foundation for the radical change in Canadian human

rights achieved by Pierre Elliott Trudeau in the 1980s. In *Toward the Charter* Christopher MacLennan explores the origins of this dramatic revolution in Canadian human rights, from its beginnings in the Great Depression to the critical developments of the 1960s. Drawing heavily on the experiences of a diverse range of human rights advocates, the author provides a detailed account of the various efforts to resist the abuse of civil liberties at the hands of the federal government and provincial legislatures and the resulting campaign for a national bill of rights. The important roles played by parliamentarians such as John Diefenbaker and academics such as F.R. Scott are placed alongside those of trade unionists, women, and a long list of individuals representing Canada's multicultural groups to reveal the diversity of the bill of rights movement. At the same time MacLennan weaves Canadian-made arguments for a bill of rights with ideas from the international human rights movement led by the United Nations to show that the Canadian experience can only be understood within a wider, global context.

Key Themes in Health and Social Care is a learning resource for students in health and social care. It provides an overview of foundational issues and core themes in the field and introduces key areas of debate, moving from an introductory level to in-depth discussion as the book progresses. Divided into three parts: the first part sets the scene, addressing introductory psychology and sociology, social policy, equality and diversity, skills for practice, and working with people the second part considers key themes such as the contribution of philosophy and politics; criminal justice; management of services; the relationship between place and wellbeing; research in health and social care; theories of counselling; housing and the built environment the third part looks at discrete areas of practice such as mental health; substance abuse, protection work; health promotion; disability studies; working with men; child welfare and public responsibility. Each chapter begins with an outline of the content and learning outcomes and includes reflective exercises to allow students to reflect on what they have read, review their learning and consolidate their understanding. Time-pressed readers wanting to 'dip into' the book for relevant areas can do so but, read from cover to cover, the book provides a comprehensive introduction to the key areas of contemporary health and social care practice. It will be particularly helpful for students undertaking health and social care undergraduate and foundation degrees.

'Honest, compassionate, brave and big hearted' - LORRAINE KELLY 'Celebrates human beings in all their glorious, messy imperfection' - CAT DEELEY Sunday Times Bestseller updated with a new chapter on Amir's experiences during the coronavirus pandemic and being on the frontlines of the historic vaccination effort. 60 hours a week 240 patients 10 minutes to make a diagnosis Welcome to the surgery. Charting his 15 years working as a GP, from rookie to becoming a partner in one of the UK's busiest surgeries, Dr Amir Khan's stories are as much about community and care as they are about blood tests and bodily fluids. Along the way, he introduces us to the patients that have taught him about love, loss and family - from the regulars to the rarities - giving him the most unbelievable highs and crushing lows, and often in just 10 minutes. There is the unsuspecting pregnant woman about to give birth at the surgery; the man offering to drop his trousers and take a urine sample there and then; the family who needs support through bereavement, the vulnerable child who will need continuing care for a long-term health condition; and, of course, the onset of COVID-19 that tested the surgery at every twist and turn. But, it's all in a day's work for Amir. *The Doctor Will See You Now* is a powerful story of hope, love and compassion, but it's also a rare insider account of what really goes on behind those surgery doors.
