How does an autopsy work?

There's two types: forensic and clinical.

All legally investigated deaths fall into 5 categories: natural, accident, homicide, suicide and undetermined.

Forensic pathologists are physicians, trained to perform autopsies.

First they gather information on you, your death and your medical records.

For a complete internal exam they start with the chest, making a Y-shaped incision.

If they need a peek inside your noggin, the examiner will move the rubber block under your neck like a pillow.
