Hope you like it :) Earwig Wings are Origami-Like | National Geographic - Earwig Wings are Origami-Like | National Geographic by National Geographic 130,524 views 5 years ago 2 minutes, 41 seconds - #NationalGeographic #Earwig #Insects, About National Geographic: National Geographic is the world's premium destination for ...

This is an earwig, a ground-dwelling I arthropod with an extraordinary ability.

Though it doesn't often fly, it's I equipped with origami-like wings.

There are more than 2,000 species of earwigs. This Eparchus yezoensis is found in Japan.

The rear wings are remarkably compact when folded under the | small, leathery forewings.

When they open, they're ten times I larger than the folded size.

Earwigs use the pincers to capture prey and to help fold their wings.

The open wings lock into place and remain stable-without the use of muscle power.

An elastic, spring-like wing I joint allows this stability.

Researchers are attempting to I replicate the earwig wing folds.

The complex folds and efficient mechanics I could have many applications ...

including folded tents, maps, I and foldable electronics.
