The most popular Renault in the car modifying world, the Clio range has something for all budgets and insurance groups. There s no shortage of modifying products either, especially if the search is widened to include French suppliers - we give contact details. What should people look for when buying products, and will the car be legal on the road afterwards? The full-colour Haynes Extreme guide to DIY modifying has the answers - and much more.

To create production and market, industrial companies are required to perform support functions (such as finance, quality, training, etc.). With the evolution of technology and the emergence of a new company profile, certain reflections have emerged, on the one hand, on a new knowledge that will have to be mastered, and on the other hand, on the probable evolution of qualifications. The technological advances so often evoked as accelerated changes in the means of production have caused both the disappearance and appearance of a large number of trades as well as the internal transformation of some. This adds comes to the debate on the extent of organizational changes and the emergence of one or more new flexible organizational models. In this manuscript, we are interested in show the repercussions of the flexible (re)organization of production and its contents regarding of in-locus training [...]

Créée le 6 octobre 2015 par la Conférence des présidents, la mission d'information sur l'offre automobile française dans une approche industrielle, énergétique et fiscale, dont la présidente est Sophie Rohfritsch et la rapporteure Delphine Batho, s'est attachée, dans un premier temps, à faire un état des lieux du marché automobile européen et des évolutions prévisibles ou souhaitables du parc. Au cours d'une trentaine de séries d'auditions, elle a rencontré les acteurs du secteur: consommateurs, équipementiers, associations professionnelles européennes, directions générales de la Commission européenne, ministères, etc. Le rapport formule 120 propositions dont la première consiste à formaliser, avant fin 2016, l'acte fondateur de l'alliance française écologie-automobile, sous la forme d'engagements réciproques et volontaires, donnant lieu à un protocole signé par l'État et la filière automobile lire le rapport(tome 1) et les comptes rendus des auditions (tome 2)

Fondé sur l'aventure exemplaire de la création de la Twingo par Renault en 1992, ce livre nous éclaire sur toutes les questions suscitées par la gestion par projets dans les entreprises. La première partie raconte l'histoire de la genèse et du déroulement du projet Twingo, la seconde analyse les implications: l'innovation, ce n'est pas seulement sortir des nouveaux produits, c'est aussi transformer les méthodes. Au delà de la success story de la Twingo, ce récit indispensable témoigne de la révolution organisationnelle toujours en cours dans tous les secteurs d'activités et du devenir des innovations organisationnelles expérimentées sur le projet Twingo qui participent, on le sait maintenant d'une transformation industrielle profonde. Cet ouvrage conclut sur la fécondité de la collaboration entre Recherche et Entreprises, sujet on ne peut plus actuel en 2012!

Un cambriolage chez sa soeur, également victime d'une curieuse erreur médicale, son cadet agressé, son aîné victime d'un accident de voiture aussi grave qu'étrange, son frère accusé de viol, d'explicables pannes de voiture... Patrick, père de famille sans histoire, va vivre la pire année de son existence : un improbable concentré de coïncidences qui va l'amener à faire la lumière sur une situation qui le dépasse... Comment expliquer l'inexplicable ? De l'anecdote à la tragédie, Patrick Bouvier livre le récit plus que troublant d'une succession d'incidents aux ramifications multiples. Sorcellerie, machination financière et règlements de comptes : adoptant le recul nécessaire, ce rationaliste plongé dans l'impasse allie description clinique des faits et ouverture d'esprit pour mieux appréhender la descente en enfer de sa famille. Intrigant, surprenant, effrayant, un roman qui soulève de nombreuses questions.

Praise for the first edition: 'An excellent text for exploring marketing communications in the 21st century.' - Ann Torres, Lecturer in Marketing, National University of Ireland, Galway 'First rate and comprehensive. This book has got it just right: a rich blend of academic underpinning and practical examples in a very readable style.' - Martin Evans, Senior Teaching in Marketing, Cardiff Business School, University of Cardiff This book introduces the core components and concepts of marketing communications for those studying at both undergraduate and postgraduate levels. It covers essential topics such as advertising, direct marketing, corporate communications, public relations, product placement, sales promotion, social media, sponsorship and many more. The author provides a set of managerial frameworks that include analysis, planning and implementation to help prepare those who go on to strategically create and effectively manage marketing communications campaigns. Every chapter includes Snapshots that help you to apply theory to engaging real-world examples. These include: BMW, Harrods, Levi's, Lynx, Tesco, Tencent, United Colors of Benetton and Wonga. Additionally, Stop Points encourage you to pause and critically reflect upon the topic for deeper learning and higher grades. The Assignment boxes invite you to test your knowledge in the form of a task based on what you have just read to also help push yourself further. The Companion Website includes longer case studies, video feeds and other useful web links, a larger glossary of key terms, and links to SAGE journal articles. Password-protected resources are also available to lecturers, including: PowerPoint slides, a tutor manual, activities for the classroom and indicative responses to the assignments and discussion questions provided in each chapter.

With the rise of science, we moderns believe, the world changed irrevocably, separating us forever from our primitive, premodern ancestors. But if we were to let go of this fond conviction, Bruno Latour asks, what would the world look like? His book, an anthropology of science, shows us how much of modernity is actually a matter of faith. What does it mean to be modern? What difference does the scientific method make? The difference, Latour explains, is in our careful distinctions between nature and society, between human and thing, distinctions that our benighted ancestors, in their world of alchemy, astrology, and phrenology, never made. But alongside this purifying practice that defines modernity, there exists another seemingly contrary one: the construction of systems that mix politics, science, technology, and nature. The ozone debate is such a hybrid, in Latour's analysis, as are global warming, deforestation, even the idea of black holes. As these hybrids proliferate, the prospect of keeping nature and culture in their separate mental chambers becomes overwhelming—and rather than try, Latour suggests, we should rethink our distinctions, rethink the definition and constitution of modernity itself. His book offers a new explanation of science that finally recognizes the connections between nature and culture—and so, between our culture and others, past and present. Nothing short of a reworking of our mental landscape, *We Have Never Been Modern* blurs the boundaries among science, the humanities, and the social sciences to enhance understanding on all sides. A summation of the work of one of the most influential and provocative interpreters of science, it aims at saving what is good and valuable in modernity and replacing the rest with a broader, fairer, and finer sense of possibility.

Marketing Communications: A Brand Narrative Approach is a mainstream, student-driven text which gives prominence to the driving force of all Marketing Communications: the imperative of Branding. The book aims to engage students in an entertaining, informative way, setting the conceptual mechanics of Marketing Communications in a contemporary, dynamic context. It includes key current trends such as: Brand narrative approach - Cases such as Dove, Harley-Davidson, Nike and World of War Craft feature real-life, salient examples which are engaging for students and reflect the growth of co-authored brand 'stories' to help build and maintain brands by customer engagement through meaningful dialogues. Media neutral/multi-media approach - This text has a sound exploration of online and offline synergy combining one-message delivery and multi-media exposures, through examples of companies and political campaigns using 'non-traditional' media to reach groups not locking into 'normal channels'. This brand new text features an impressive mixture of real-life brand case studies underpinned with recent academic research and market place dynamics. The format is structured into three sections covering analysis, planning and implementation and control of Marketing Communications. Using full colour examples of brands, and student-friendly diagrams, the book acknowledges that the modern student learns visually as well as through text.

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.

The use of natural fibres as reinforcements in composites has grown in importance in recent years. Natural Fibre Composites summarises the wealth of significant recent research in this area. Chapters in part one introduce and explore the structure, properties, processing, and applications of natural fibre reinforcements, including those made from wood and cellulosic fibres. Part two describes and illustrates the processing of natural fibre composites. Chapters discuss ethical practices in the processing of green composites, manufacturing methods and compression and injection molding techniques for natural fibre composites, and thermoset matrix natural fibre-reinforced composites. Part three highlights and interprets the testing and properties of natural fibre composites including, non-destructive and high strain rate testing. The performance of natural fibre composites is examined under dynamic loading, the response of natural fibre composites to impact damage is appraised, and the response of natural fibre composites in a marine environment is assessed. Natural Fibre Composites is a technical guide for professionals requiring an understanding of natural fibre composite materials. It offers reviews, applications and evaluations of the subject for researchers and engineers. Neo-Hasidism applies the Hasidic masters' spiritual insights—of God's presence everywhere, of seeking the magnificent within the everyday, in doing all things with love and joy, uplifting all of life to become a vehicle of God's service—to contemporary Judaism, as practiced by men and women who do not live within the strictly bounded world of the Hasidic community. This first-ever anthology of Neo-Hasidic philosophy brings together the writings of its progenitors: five great twentieth-century European and American Jewish thinkers—Hillel Zeitlin, Martin Buber, Abraham Joshua Heschel, Shlomo Carlebach, and Zalman Schachter-Shalomi—plus a young Arthur Green. The thinkers reflect on the inner life of the individual and their dreams of creating a Neo-Hasidic spiritual community. The editors' introductions and notes analyze each thinker's contributions to Neo-Hasidic thought and influence on the movement. Zeitlin and Buber initiated a renewal of Hasidism for the modern world; Heschel's work is quietly infused with Neo-Hasidic thought; Carlebach and Schachter-Shalomi re-created Neo-Hasidism for American Jews in the 1960s; and Green is the first American-born Jewish thinker fully identified with the movement. Previously unpublished materials by Carlebach and Schachter-Shalomi include an interview with Schachter-Shalomi about his decision to leave Chabad-Lubavitch and embark on his own Neo-Hasidic path.

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

A Mind of My Own

The essential gift for lovers of Prince, Dickens and everyone in between! In Nick Hornby's completely joyous and original new book two great figures share the stage. Charles Dickens and Prince. Two wildly different artists who caught fire and lit up the world in ways no others could. Where did their magic come from? How did they work so hard and produce so much? How did they manage or give in to the restlessness and intensity of their creativity? How did they use it, and did it kill them? With wit, curiosity and deep admiration Nick Hornby traces their extraordinary lives - from their difficult beginnings to the women they fell for to their limitless energy for work, to their money and the movies - and brilliantly illuminates their very particular kind of genius. 'I love this. It's smart and funny and elegantly persuasive' Robert Douglas-Fairhurst, author of *Becoming Dickens*

A New Hasidism: Roots

In modern life, technology is everywhere. Yet as a concept, technology is a mess. In popular discourse, technology is little more than the latest digital innovations. Scholars do little better, offering up competing definitions that include everything from steelmaking to singing. In *Technology: Critical History of a Concept*, Eric Schatzberg explains why technology is so difficult to define by examining its three thousand year history, one shaped by persistent tensions between scholars and technical practitioners. Since the time of the ancient Greeks, scholars have tended to hold technicians in low esteem, defining technical practices as mere means toward ends defined by others. Technicians, in contrast, have repeatedly pushed back against this characterization, insisting on the dignity, creativity, and cultural worth of their work. The tension between scholars and technicians continued from Aristotle through Francis Bacon and into the nineteenth century. It was only in the twentieth century that modern meanings of technology arose: technology as the industrial arts, technology as applied science, and technology as technique. Schatzberg traces these three meanings to the present day, when discourse about technology has become pervasive, but confusion among the three principal meanings of technology remains common. He shows that only through a humanistic concept of technology can we understand the complex human choices embedded in our modern world.

The Rejection of Consequentialism

This book provides cutting edge research and knowledge and an academic study of the impact of globalisation in different areas affecting management and how management is responding. It gives a comprehensive analysis of what is actually happening and likely future trends. It is not just a focus on 'convergence' arguments, but integrates a broader view of still remaining regional and national differences in management and organisation. The book draws on new theoretical approaches in the field of international business, highlighting areas such as Anglo-German subsidiaries of MNCs, HRM practices and change management processes or employment relations in US-based MNCs in Europe and many other aspects.

'KUMBA AFRICA', is a compilation of African Short Stories written as fiction by Sampson Ejike Odum, nostalgically taking our memory back several thousands of years ago in Africa, reminding us about our past heritage. It digs deep into the traditional life style of the Africans of old, their beliefs, their leadership, their courage, their culture, their wars, their defeat and their victories long before the emergence of the white man on the soil of Africa. As a talented writer of rich resource and superior creativity, armed with in-depth knowledge of different cultures and traditions in Africa, the Author throws light on the rich cultural heritage of the people of Africa when civilization was yet unknown to the people. The book reminds the readers that the Africans of old kept their pride and still enjoyed their own lives. They celebrated victories when wars were won, enjoyed their New yam festivals and villages engaged themselves in seasonal wrestling contest etc; Early morning during harmattan season, they gathered firewood and made fire inside their small huts to hit up their bodies from the chilling cold of the harmattan. That was the Africa of old we will always remember. In Africa today, the story have changed. The people now enjoy civilized cultures made possible by the influence of the white man through his scientific and technological process. Yet there are some uncivilized places in Africa whose people haven't tested or felt the impact of civilization. These people still maintain their ancient traditions and culture. In everything, we believe that days when people paraded barefooted in Africa to the swamp to tap palm wine and fetch firewood from there farms are almost fading away. The huts are now gradually been replaced with houses built of blocks and beautiful roofs. Thanks to modern civilization. Donkeys

and camels are no longer used for carrying heavy loads for merchants. They are now been replaced by heavy trucks and lorries. African traditional methods of healing are now been substituted by hospitals. In all these, I will always love and remember Africa, the home of my birth and must respect her cultures and traditions as an AFRICAN AUTHOR.

Challenges for European Management in a Global Context

"For almost 300 years, an organisation has quietly tried to change almost every aspect of life in Britain. That organisation is the Royal Society for the Encouragement of Arts, Manufactures and Commerce, often known simply as the Royal Society of Arts. It has acted as Britain's private national improvement agency, in every way imaginable - essentially, a society for the improvement of everything and anything. This book is its history. From its beginnings in a coffee house in the mid-eighteenth century, the Society has tried to change Britain's art, industry, laws, music, environment, education, and even culture. It has sometimes even succeeded. It has been a prize-fund for innovations, a platform for Victorian utilitarian reformers, a convenor of disparate interest groups, and the focal point for social movements. There has never been an organisation quite like it, constantly having to reinvent itself to find something new to improve. The book rewrites many of the old official histories of the Society and updates them to the present day, incorporating over half a century of further research into the periods they covered, along with new insights into the organisation's evolution. The book reveals the hidden and often surprising history of how a few public-spirited people tried to make their country better, offering lessons from their triumphs and their failures for all would-be reformers today"--

90 Two By: Dastan Khalili DiaVerse, dia meaning "two" and verse for the poetic rhyme, is a brand-new style of poetry where the only rule is all stanzas must have a maximum of two words. Created by poet Dastan Khalili, the style of DiaVerse breathes new life into poetry. The restraint of DiaVerse forces poets to use the purest forms of expression. 90 Two is ninety of Khalili's DiaVerse poems, written over the last five years. He combines his poetic verses with digital artwork and imagery, each conveying a sensation of inspiration that came to life with each poem.

Valve train systems control the gas exchange in a combustion engine, which means that they represent a significant opportunity for optimizing the combustion process. Since they draw energy from the crankshaft, an efficient valve train contributes greatly to improving overall efficiency. The components of the valve train system are subjected to high loads. In addition to wear due to mechanical forces increasing combustion pressures and temperatures, in particular, place greater demands on the materials and heat dissipation of components on the combustion side. This technical book clearly and thoroughly presents a holistic understanding of the valve train system.

L' experience de la ville : La Chaux-de-Fonds ; the experience of a city

How did BMW recover from the edge of bankruptcy to become one of Europe's strongest companies? Why did Saatchi and Saatchi's global strategy bring the company to its knees? Why has Philips's outstanding record in innovation not been translated into success in the market? What can be learnt from the marriage contract about the conduct of commercial negotiations? These are some of the questions addressed as John Kay asks 'What makes a business successful?' Drawing on his own business experience and on concepts in economics, legal theory, and sociology, the author presents a fresh approach to questions of business strategy. He rejects the military analogy which underpins

much strategic thinking, in which success depends on size and share, on vision and leadership, on shifting patterns of mergers and alliances. John Kay argues that outstanding businesses derive their strength from a distinctive structure of relationships with employees, customers, and suppliers, and explains why continuity and stability in these relationships is essential for a flexible and co-operative response to change. By integrating organizational and financial perspectives on the performance of the firm, Kay not only gives insights into the creation of effective business strategies, but sheds light on the success - and failure - of national economies. As the single market develops, this book - full of insight and rigour, yet lively in style - is probably the most important European contribution to strategic thinking for many years. It will be vital reading for all who want to understand what distinguishes the successful company.

A Life Less Ordinary

Combining case studies with accessible but rigorous production models and historical background, this book challenges accepted views on Japanese production methods in the world car industry. The Myth of Japanese Efficiency casts a familiar debate in an unfamiliar light. It will strongly appeal to management and business strategy academics, political economists and industrial sociologists interested in the debate on Fordist versus 'post-Fordist' production methods/'lean and flexible' manufacture and Japanese post-war success in the world market for manufactured goods. Human resource management specialists interested in best production practice will also find much to interest them within this book.

Helps readers understand and appreciate what the history of wind power can teach us about technology innovation and provides the implications for both wind power today and its future This book takes readers on a journey through the history of wind power in order to show how the technology evolved over the course of the twentieth century and where it may be headed in the twenty-first century. It introduces and examines broad themes such as government funding of wind power, the role of fossil fuels in wind power development, and the importance of entrepreneurs in wind power development. It also discusses the lessons learned from wind power technology innovation and makes them relevant to the understanding of wind power today and in the future. Spanning the entire history of wind power (1888-2018), *The Wind Power Story: A Century of Innovation that Reshaped the Global Energy Landscape* provides balanced coverage of each decade as well as the important wind power technology innovations that occurred during that time. Compelling from the first page to the last, it offers chapters covering the pioneers of wind power; the age of small wind; wind power in the wake of war; wind power's use across Europe; government-funded research programs; how Denmark reinvented wind power in the 1970s; the California Wind Rush of the 1980s; wind power's rise in Spain; America's wind power starting in the 1990s; India's wind power path; the wind power surge in China; the globalization of wind power; and much more. In addition, this text: Spans the entire global history of wind power, while weaving together both the historical context and the technical details of wind power innovation Provides historical context for wind power developments and explains the evolution of wind turbine technology in an easy-to-understand manner Discusses the policy, technology, and market evolution of wind power in commonly understood language Offers a review of the surrounding power technology, policy, and market environment throughout the history of wind power A book that both specialists and non-specialists can read in order to understand and appreciate the past, present, and future of wind power technology, *The Wind Power Story: A Century of Innovation that Reshaped the Global Energy Landscape* will be of great interest to any engineer and any interested readers looking to understand wind power technologies, markets, and policies in one book.

What would you do if you owed \$20,000? Would you: a) Not tell your parents? b) Stop colouring your hair, having pedicures and buying Gucci? c) Start your own website that asks for money without apology? If you were Karyn Bosnak, you'd do all three... In New York for the first time, with the dream job and the smart flat, Karyn starts spending...and spending. But when it all goes horribly wrong, and her credit card balance mounts in a terrifying manner, Karyn knows that she has to take control. She starts her website www.savekaryn.com on which she fearlessly asks for donations to help pay off her debts. The website receives over 2 million hits and has replies from all over the world - some supportive, many abusive. But after four months, Karyn has become a new woman- debt-free, grateful and happy. This is the hilarious and touching true story of how she does it.

Tapestry of Lies

The story of a woman's life, from childhood to death, somewhere in provincial France, from the 1950s to just shy of 2025. She has doting parents, does well at school, finds a loving husband after one abortive attempt at passion, buys a big house with a moonlit terrace, makes decent money, has children, changes jobs, retires, grows old and dies. All in the comfort that the middle-classes have grown accustomed to. But she's bored. She takes up all sorts of outlets to try to make something happen in her life: adultery, charity work, esotericism, manic house-cleaning, motherhood and various hobbies - each one abandoned faster than the last. But no matter what she does, her life remains unfocussed and unfulfilled. Nothing truly satisfies her, because deep down - just like the town where she lives - the landscape is non-descript, flat, horizontal. Sophie Divry dramatises the philosophical conflict between freedom and comfort that marks women's lives in a materialistic world. Our heroine is an endearing, contemporary Emma Bovary, and Divry's prose will remind readers of the best of Houellebecq, the cold, implacable historian who paints a precise portrait of an era and those who inhabit it and in doing so renders existence indelibly absurd. Translated from the French by Alison Anderson

The Wind Power Story

This book gathers selected papers presented at International Conference on Machine Learning, Advances in Computing, Renewable Energy and Communication (MARC 2020), held in Krishna Engineering College, Ghaziabad, India, during December 17–18, 2020. This book discusses key concepts, challenges, and potential solutions in connection with established and emerging topics in advanced computing, renewable energy, and network communications.

There is an increasing movement of scientists and engineers who are dedicated to minimising the environmental impact of polymer composite production. Life cycle assessment is of paramount importance at every stage of a product's life, from initial synthesis through to final disposal and a sustainable society needs environmentally safe materials and processing methods. With an internationally recognised team of contributors, Green Composites examines fibre reinforced polymer composite production and explains how environmental footprints can be diminished at every stage of the life cycle. The introductory chapters look at why we should consider green composites, their design and life cycle assessment. The properties of natural fibre sources such as cellulose and wood are then discussed. Chapter 6 examines recyclable synthetic fibre-thermoplastic composites as an alternative solution and polymers derived from natural sources are covered in Chapter 7. The factors that influence the properties of these natural composites and natural fibre thermoplastic composites are detailed in Chapters 8 and 9. The final four chapters consider clean processing, applications, recycling, degradation and reprocessing. Green composites is an essential guide for agricultural crop producers, government agricultural departments, automotive companies, composite producers and material scientists all dedicated to the promotion and practice of eco-friendly materials and production methods. "This study of contemporary Britain as a capitalism poised between American and European models, this innovative book begins with a bold re-interpretation of the economic contexts and bequests of Thatcherism that takes up the 'shock' hypothesis of Naomi Klein and roots it in an alternative economic history, and finishes with a critical assessment of the New Labour project. Pursuing the state in its various policy guises - including its attitudes towards transnational corporations, the public-private interface and gendered employment structures and equalities - it explores themes of legitimisation, denial and opportunism via a series of original studies of comparative policy importance capped by a commentary on the early impact of the first great crisis of the 21st century. Building upon a range of recent contributions to both the 'varieties of capitalism' and 'third way' debates, the case is made for a globally and historically aware approach that treats the state as a key actor."--Book cover.

Madame Bovary of the Suburbs

By introducing the new concept of alternative (im)mobilities, this collection draws attention to a different approach to mobility practices. In doing so, this ground-breaking volume explores a range of issues related related to (im)mobilities and the Covid-19 pandemic, transport and social practices, and media

and urban tourism. Designed and organized in a legally or illegally way, alternative (im)mobilities are examples of those daily practices of displacement of people, objects, and information, which mobilize a multidisciplinary framework of urbanization, shedding light on important and long-standing issues of inequality and the lack of recognition of diversity in economics, social and culture urban life. This volume opens up a new set of research questions related to the complex ways in which informal actors cope with their everyday life experience, regarding dwelling, commuting, working, caring of vulnerable people, health issues, access to information, among other mobility practices, besides the lack of essential – and infrastructural - public services. This volume will be of great interest to researchers and scholars in geography and the social sciences interested in mobilities, transport, communication, tourism, mobility justice and inequality, public decision making and health studies.

Machine Learning, Advances in Computing, Renewable Energy and Communication

The purpose of aligning short fibres in a fibre-reinforced material is to improve the mechanical properties of the resulting composite. Aligning the fibres, generally in a preferred direction, allows them to contribute as much as possible to reinforcing the material. Flow induced alignment in composite materials details, in a single volume, the science, processing, applications, characterisation and properties of composite materials reinforced with short fibres that have been orientated in a preferred direction by flows arising during processing. The topics discussed include fibre alignment and materials rheology; processes that can produce fibre alignment in polymeric, liquid crystal polymeric, and metallic composites; materials characterization and mechanical properties; and modelling of processes and materials properties. The technology of fibre-reinforced composites is continually evolving and this book provides timely and much needed information about this important class of engineering materials. The book is an essential reference work for industry and an indispensable guide for the research worker, advanced student and materials scientist.

'This book makes a unique and invaluable contribution to our understanding of the changing nature of employment and its consequences for industrialized societies. It combines industry case studies, company case studies, and specific country case studies to paint a multi-dimensional picture of the spread of precarious employment and the responses by trade unions and other worker mobilizations. In addition, the astute theoretical chapters demonstrate how the trend toward precarization is reshaping power relationships in ways that have significant implications for individual security and well-being, collective agency and empowerment, societal equality and stability, and the vitality of democracy itself. Together these essays provide an exceptionally rich picture and insightful analysis of these important trends in contemporary industrialized societies.' - Katherine V.W.
