International Handbook of Adolescent Pregnancy

The rates are on the decline worldwide. But adolescent pregnancies still occur, placing millions of girls each year at risk for medical complications and social isolation and their babies for severe health problems-especially when prenatal care is inadequate or nonexistent. But as the opportunity for young women and girls increases around the world, adolescent pregnancy will continue to decline. Featuring reports from countries across the developed and developing worlds, the International Handbook of Adolescent Pregnancy analyzes the scope of the problem and the diversity of social and professional responses. Its biological/ecological perspective identifies factors influencing childhood pregnancy, as well as outcomes, challenges and needs of very young mothers as they differ across nations and regions. Salient comparisons are made as cultural contexts and community support vary widely and attention is paid to issues such as child marriage, LGBT concerns and the impact of religion and politics on health care, particularly access to contraception, abortion and other services. This global coverage heightens the understanding of readers involved in care, education and prevention programs and otherwise concerned with the psychosocial development, reproductive health and general well-being of girls. Included in the Handbook: Biological influences of adolescent pregnancy. Adolescent maternal health and childbearing. Adolescent pregnancy and mental health. International perspectives on adolescent fathers. Adolescent pregnancy as a feminist issue. Adolescent pregnancy as a social problem. Plus viewpoints from more than thirty countries. As a unique source of up-to-date findings and clear-headed analysis, the International Handbook of Adolescent Pregnancy is a go-to reference for practitioners and researchers in maternal and child health, pediatrics, adolescent medicine and global health.

Helping Victims of Violent Crime

Over the past two decades, violent crime has become one of the most serious domestic problems in the United States. Approximately 13 million people (nearly 5% of the U.S. population) are victims of crime every year, and of that, approximately one and a half million are victims of violent crime. Ensuring quality of life for victims of crime is therefore a major challenge facing policy makers and mental health providers. Helping Victims of Violent Crime grounds victim assistance treatments in a victim-centered and strengths perspective. The book explores victim assistance through systems theory: the holistic notion of examining the client in his/her environment and a key theoretical underpinning of social work practice. The basic assumption of systems theory is homeostasis. A crime event causes a change in homeostasis and often results in disequilibrium. The victim's focus at this point is to regain equilibrium. Under the systems metatheory, coping, crisis and attribution theories provide a good framework for victim-centered intervention. Stress and coping theories posit that three factors determine the state of balance: perception of the event, available situational support, and coping mechanisms. Crisis theory offers a framework to understand a victim's response to a crime. The basic assumption of crisis theory asserts that when a crisis occurs, people respond with a fairly predictable physical and emotional pattern. The intensity and manifestation of this pattern may vary from individual to individual. Finally, attribution theory asserts that individuals make cognitive appraisals of a stressful situation in both positive and negative ways. These appraisals are based on the individual's assertion that they can understand, predict, and control circumstances and result in the victim's assignment of responsibility for solving or helping with problems that have arisen from the crime event. In summary, these four theories can delineate a definitive model for approach to the victimization process. It is from this theoretical framework that Treating Victims of Violent Crime offers assessments and interventions with a fuller understanding of the victimization recovery process. The book includes analysis of victims of family violence (child abuse, elder abuse, partner violence) as well as stranger violence (sexual assault, homicide, and terrorism).

Social Work Practice in Maternal and Child Health

This book focuses on the impact of social stigma on adolescents who are at high risk of teen pregnancy. It describes and discusses personal and social factors that predispose them to becoming pregnant and having babies; factors that may subsequently protect or more often, compromise outcomes for both parents and children. The authors, who represent a range of social roles and perspectives, describe the

pathways from stigma and its unfounded beliefs about disadvantaged adolescents, to the ways stress burdens teen parents and their children. They note that successful teen parents often go unrecognized and wonder how many more are hobbled by stigma. They recognize the lifespan impacts of stress as described in the ACE studies; stress that has psychological, health and economic implications at individual and social levels. They examine the impact of stigma on parent-child relationships and the attachment system, a stress management system, learned in infancy and persisting into adulthood. The book describes how stigma finds its way into daily interpersonal encounters, systemic policies and practices, and even into healthcare research and services. This sets the stage for an in-depth look at attachment systems within stress management, interventions, and recommendations for professionals whose work is impacted by these issues. Written by experts in the field, this text is the first to cover the current understanding of the risk factors, advanced understanding of developmental issues, and the key intervention tactics for the most positive outcome for adolescent parents and their families. Adolescent Pregnancy and Parenting is an excellent resource for psychiatrists, psychologists, physicians, social workers, educators, researchers, and policy makers working with youths at risk for teenage pregnancies.

Adolescent Pregnancy and Parenting

The applicability of attachment theory and research to social work and social policy relating to infants and children is well-established. Yet, its usefulness for enhancing the understanding of adults and their needs, both individually and as a group, has been less featured in the attachment literature. Adult Attachment in Clinical Social Work Practice is a wide-ranging look at attachment theory and research, its application to adults, and its natural fit with the social work profession. This edited volume covers the applicability of adult attachment theory to the clinical social work profession's various domains that include human behavior, practice, policy, research, and social work education. It addresses the broad spectrum of clinical social work, including practice in a variety of public and private settings and with a number of diverse populations, including racial-ethnic groups, gays and lesbians, trauma survivors, and child welfare parents. The book highlights the underemphasized contribution of the social work profession to the development of attachment theory and research.

Adult Attachment in Clinical Social Work

The C.D.C. reports that a total of 249,078 babies were born to women between the ages of 15 to 19 in 2014. This informative volume contextualizes and explores issues surrounding teen pregnancy. Chapters discuss its causes, social factors that contribute to teen pregnancy, if it is a public health problem, and the various options for pregnant teens.

Teen Pregnancy

How big of a concern is teen pregnancy in today's society? What options do teens have once they get pregnant? Socio-Cultural Influences on Teenage Pregnancy and Contemporary Prevention Measures

Public health social work is an interdisciplinary, epidemiologically oriented approach to improving human health and well-being. About one quarter of all social workers in the United States currently work in medical or public health settings, a number that is expected to increase significantly in coming years. This handbook, written and edited by respected leaders of the Social Work Section of the American Public Health Association (APHA), describes the rapidly expanding roles of public health social workers as these two disciplines continue to join forces. The handbook describes how the alliance of social work and public health has already made significant progress and ways in which it will further improve health care in the United States. It addresses job opportunities for public health social workers in such fields as disease prevention, health promotion, child welfare, gerontology, disaster response, trauma intervention, substance abuse, outreach services, and advocacy. It also covers public health social work with special populations and in neighborhood, rural, and global settings. Key Features: Authored by highly respected APHA Social Work members Describes the ways in which the alliance of social work and public health is improving health care Highlights key settings and job opportunities for public health social workers Addresses public health social work with special populations and its relationship to such medical topics as chronic conditions, HIV/AIDS, disabilities, and more

Enhancing the Well-being of Children and Families Through Effective Interventions

Adolescence is a developmental period of accelerating physical, psychological, social! cultural, and cognitive development, often characterized by confronting and surmounting a myriad of challenges and establishing a sense of self-identity and autonomy. It is also, unfortunately, a period fraught with many threats to the health and well-being of adolescents and with substantial consequent impairment and disability. Many of the adverse health consequences experienced by adolescents are, to a large extent, the result of their risk behaviors. Many adolescents today, and perhaps an increasing number in the future, are at risk for death, disease, and other adverse health outcomes that are not primarily biomedical in origin. In general, there has been a marked change in the causes of morbidity and mortality among adolescents. Previously, infectious diseases accounted for a disproportionate share of adolescent morbidity and mortality. At present, however, the overwhelming toll of adolescent morbidity and mortality is the result of lifestyle practices.

Handbook for Public Health Social Work

Presenting the findings of a three-year study, *Pregnancy and Parenthood* explores the experiences of young women who become pregnant or parents while in, or soon after leaving, public care and examines the extent to which they were prepared for parenthood and supported once they became mothers. It also compares the views of a group of young people in public care who are neither pregnant or parents with those of a group living with their families. This book is essential reading for those working with young people in public care, policy makers in health promotion, social work and social policy.

Strengthening Child and Adolescent Mental Health (CAMH) Services and Systems in Lower-and-Middle-Income Countries (LMICs)

Services for families and children are rightfully the focus of intense scrutiny and debate, and there is a clear need to establish a knowledge of which services work well. This volume provides a comprehensive overview of research evidence from the UK and USA on the effectiveness of selected child welfare interventions. It addresses the challenges of measuring effectiveness in child welfare and explains the policy context for child welfare service delivery. Leading international contributors summarize the evidence of effectiveness in each core area, and consider the impact on children's development, parenting capacity and the wider community. Critically, the book also draws out the implications of the evidence for policy, practice and service delivery as well as for future research. This book is essential reading for policy makers, practitioners and commissioners of services in child welfare as well as students and researchers.

Handbook of Adolescent Health Risk Behavior

This book deals with ways of helping families cope with the difficulty of raising adolescents. Professional social workers - along with other human service professionals - encounter these families in numerous settings: child welfare and family service agencies, hospitals, schools, community mental health clinics, residential treatment centers, juvenile halls and detention centers, recreational and vocational training organizations, and many others. While families from all walks of life may be found in these settings, families who have suffered the additional stresses of poverty, discrimination, and the consequences of physical and mental illness are commonly overrepresented. Even under the best of circumstances, the adolescent years often put the strongest family structures to the test - sometimes to the breaking point. A recent national study of over one thousand average, middle-income, two parent families reviewed the strengths, stresses, and satisfactions of the family life cycle (Olson and McCubbin 1983). As many would expect, families with adolescents were found to experience more stress and lower levels of family adaptability, cohesion, and marital and family satisfaction than any other developmental stage. The families with adolescents who fared best were those with such marital resources as good communication and conflict resolution skills, satisfying sexual relations, and good parent-adolescent communication.

Pregnancy and Parenthood

This book explores the experiences of pregnant teenagers, their partners, and midwives, from pregnancy realization through the early years of motherhood. It examines changing attitudes to female sexuality and moral discourses on adolescent subjectivity especially as these pertain to teenage motherhood.

Surviving Teenage Motherhood

With all of the progress African Americans have made, they still face many risks that threaten the entire race or place segments in jeopardy of survival. This work examines the widespread problem and suggests solutions. This two-volume set examines the issues and policies that put African Americans at risk in our culture today, utilizing the most recent research from scholars in the field to provide not only objective, encyclopedic information, but also varying viewpoints to encourage critical thinking. The entries comprehensively document how African Americans are treated differently, have more negative outcomes in the same situations than other races, and face risks due to issues inherent in their past or current social and economic conditions. Care is taken to note distinctions between subgroups and not further a "blanket approach" to the diverse members of this minority population. Intended for members of the African American community; societal scholars; students in the fields of health, social studies, and public policy; as well as general readers, this work will provide readers with a deeper understanding of key components affecting the lives of African Americans today.

Current Catalog

This unique volume demonstrates the effectiveness of applying an evidence-based practice process to the solution of selected social problems. It focuses on social work interventions addressing family, community, and societal factors. Research indicates that reinforcement for positive behavior at the group, organizational, and community levels, as opposed to interventions focusing on the individual, are more likely to result in meaningful improvement in well-being. Chapters address issues such as child maltreatment, educationally disadvantaged children, violence in schools, adolescent sexuality, substance abuse, crime, urban decline and homelessness, unemployment, marital conflict, and chronic medical problems. Empirically Based Interventions Targeting Social Problems is a relevant resource for practitioners and counseling professionals whose work involves interventions with children and families as well as communities. It also is a useful text for graduate students in social work as well as students preparing for other helping professions including psychology, sociology, marital and family counseling, and child development.

Empirically Based Interventions Targeting Social Problems

This open access book brings together discourse on children and peace from the 15th International Symposium on the Contributions of Psychology to Peace, covering issues pertinent to children and peace and approaches to making their world safer, fairer and more sustainable. The book is divided into nine sections that examine traditional themes (social construction and deconstruction of diversity, intergenerational transitions and memories of war, and multiculturalism), as well as contemporary issues such as Europe's "migration crisis", radicalization and violent extremism, and violence in families, schools and communities. Chapters contextualize each issue within specific social ecological frameworks in order to reflect on the multiplicity of influences that affect different outcomes and to discuss how the findings can be applied in different contexts. The volume also provides solutions and hope through its focus on youth empowerment and peacebuilding programs for children and families. This forward-thinking volume offers a multitude of views, approaches, and strategies for research and activism drawn from peace psychology scholars and United Nations researchers and practitioners. This book's multi-layered emphasis on context, structural determinants of peace and conflict, and use of research for action towards social cohesion for children and youth has not been brought together in other peace psychology literature to the same extent. Children and Peace: From Research to Action will be a useful resource for peace psychology academics and students, as well as social and developmental psychology academics and students, peace and development practitioners and activists, policy makers who need to make decisions about the matters covered in the book, child rights advocates and members of multilateral organizations such as the UN.
